Research and Applications in Global Supercomputing

Series: Advances in Systems Analysis, Software Engineering, and High Performance Computing

Editors: Richard S. Segall (Arkansas State University, USA), Jeffrey S. Cook (Independent Researcher, USA) and Qingyu Zhang (Shenzhen University, China)

Description:
Rapidly generating and processing large amounts of data, supercomputers are currently at the leading edge of computing technologies. Supercomputers are employed in many different fields, establishing them as an integral part of the computational sciences.

Research and Applications in Global Supercomputing investigates current and emerging research in the field, as well as the application of this technology to a variety of areas.

Readers:
Highlighting a broad range of concepts, this publication is a comprehensive reference source for professionals, researchers, students, and practitioners interested in the various topics pertaining to supercomputing and how this technology can be applied to solve problems in a multitude of disciplines.

Topics Covered:
- Bioinformatics
- Cloud Computing
- Energy Network Operation
- High Performance Computing
- Nano-Material Applications
- Nuclear Power Applications
- Steganography
