The 21st century has seen a number of advancements in technology, including the use of high performance computing. Computing resources are being used by the science and economy fields for data processing, simulation, and modeling. These innovations aid in the support of production, logistics, and mobility processes.

Integrated Information and Computing Systems for Natural, Spatial, and Social Sciences covers a carefully selected spectrum of the most up to date issues, revealing the benefits, dynamism, potential, and challenges of information and computing system application scenarios and components from a wide spectrum of prominent disciplines. This comprehensive collection offers important guidance on the development stage of the universal solution to information and computing systems for researchers as well as industry decision makers and developers.

Topics Covered:
- Integrated Systems, Information, Communication, and Computation
- Collaboration, Frameworks, and Legal Aspects
- High End Computing, Storage, and Services
- Communication, Computation, Advanced Scientific Computing
- Advanced Applications, Modeling and Simulation in Natural Sciences, Geosciences, and Medicine
- Big Data Exploration, Visualisation, Education, and Social Media
- Spatial Sciences, Social Sciences, Teaching, Learning, and Digital Media

Market: This premier publication is essential for all academic and research library reference collections. It is a crucial tool for academicians, researchers, and practitioners and is ideal for classroom use.
