Dependability and Computer Engineering: Concepts for Software-Intensive Systems

Luigia Petre (Åbo Akademi University, Finland), Kaisa Sere (Åbo Akademi University, Finland) and Elena Troubitsyna (Åbo Akademi University, Finland)

Rapid development of digital technologies has led to the widespread use of software in all aspects of our life. The degree of reliance that can be justifiably placed on software-intensive systems is expressed by the notion of dependability. The complexity of modern software-intensive systems poses the greatest threat to dependability. Furthermore, software—the most complex system component—is recognized to be the most error-prone part of the system.

Dependability and Computer Engineering: Concepts for Software-Intensive Systems offers a state-of-the-art overview of the dependability research, from engineering various software-intensive systems to validating existing IT-frameworks and solving generic and particular problems related to the dependable use of IT in our society. It is important to understand how dependability is manifested in software-intensive systems, how it is developed, and how it can be enhanced at various levels in systems and organizations. This book uncovers the existing research on the topic as well as the key challenges associated with the engineering of dependable IT systems in the future.

Topics Covered:

- Dependability and Security in Domain-Specific Areas
- Methodologies for Developing Dependable Systems
- Model-Based Reasoning
- Modeling Real-Time Behavior
- Reasoning about Hybrid Systems
- Security in Distributed Systems
- Software and Hardware Correctness
- Software Security
- Testing and Verification of Software-Intensive Systems
- Verification of Complex Control Systems

Print: US $195.00  |  Perpetual: US $295.00  |  Print + Perpetual: US $390.00

Market: This premier publication is essential for all academic and research library reference collections. It is a crucial tool for academicians, researchers, and practitioners and is ideal for classroom use.

Luigia Petre is a university lecturer at Åbo Akademi University, Department of Information Technologies, Turku, Finland. She got her PhD in Computer Science in 2005 on modeling techniques in formal methods. Her research interests include energy modeling, network availability, integration of formal methods, and time and space dependent computing. She has co-organized major conferences in her field such as the Integrated Formal Methods (IFM) 2002 as well as Formal Methods (FM) 2008. She has been in the programme committee of IFM in 2002, 2004, 2005, and 2007. Currently, she is coordinating NODES - a Nordic Dependability Network, concerned with deploying a dependability curriculum for the Nordic countries. She is a researcher in the EC-funded project DEPLOY. She has about 30 refereed publications.
Section 1: Modeling for Dependability

Chapter 1
Towards a Holistic Approach to Fault Management
Goldszmidt Moises (Microsoft Corporation, USA)
Malek Miroslaw (Humboldt-Universität zu Berlin, Germany)
Nadjm-Tehrani Simin (Linköping University, Sweden)
Narasimhan Priya (Carnegie Mellon University, USA)
Salfner Felix (Humboldt-Universität zu Berlin, Germany)
Ward Paul A. X. (University of Waterloo, Canada)
Wilkes John (Google Inc., USA)

Chapter 2
Exceptions for Dependability
Sekerinski Emil (McMaster University, Canada)

Chapter 3
Network Availability for Distributed Applications
Petre Luigia (Åbo Akademi University, Finland)
Sere Kaisa (Åbo Akademi University, Finland)
Waldén Marina (Åbo Akademi University, Finland)

Section 2: Ensuring Dependability

Chapter 4
Formal Stepwise Development of Scalable and Reliable Multiagent Systems
Grotsev Denis (Kazakh National University, Kazakhstan)
Iliasov Alexei (Newcastle University, UK)
Romanovsky Alexander (Newcastle University, UK)

Chapter 5
Development of Safety-Critical Control Systems in Event-B Using FMEA
Prokhorova Yuliya (Åbo Akademi University, Finland)
Troubitsyna Elena (Åbo Akademi University, Finland)
Laibinis Linas (Åbo Akademi University, Finland)
Kharchenko Vjaacheslav (National Aerospace University KhAI, Ukraine)

Chapter 6
Towards Designing FPGA-Based Systems by Refinement in B
Ostroumov Sergey (Åbo Akademi University, Finland)
Troubitsyna Elena (Åbo Akademi University, Finland)
Laibinis Linas (Åbo Akademi University, Finland)
Kharchenko Vjaacheslav (National Aerospace University KhAI, Ukraine)

Chapter 7
Online Testing of Non-deterministic Systems with the Reactive Planning Tester
Vain Jüri (Tallinn University of Technology, Estonia)
Kääramees Marko (Tallinn University of Technology, Estonia)
Markvardt Maili (Tallinn University of Technology, Estonia)

Chapter 8
Development of Controllers Using Simulink and Contract-Based Design
Boström Pontus (Åbo Akademi University, Finland)
Huova Mikko (Tampere University of Technology, Finland)
Marta (Piąska) Olszewska (Åbo Akademi University & Turku Centre for Computer Science, Finland)
Länna Matti (Tampere University of Technology, Finland)
Heikkilä Mikko (Tampere University of Technology, Finland)
Sere Kaisa (Åbo Akademi University, Finland)
Waldén Marina (Åbo Akademi University, Finland)

Section 3: Security Fundamentals

Chapter 9
Modeling Security Goals and Software Vulnerabilities
Byers David (Linköping University, Sweden)
Shahmehri Nahid (Linköping University, Sweden)

Chapter 10
A Method for Model-Driven Information Flow Security
Seehusen Fredrik (SINTEF, Norway)
Stolen Keril (SINTEF, University of Oslo, Norway)

Section 4: Applied Security

Chapter 11
Security of Dependable Systems
Ahmed Naveed (Technical University of Denmark, Denmark)
Jensen Christian Damsgaard (Technical University of Denmark, Denmark)

Chapter 12
Application Security for Mobile Devices
Costa Gabriele (Istituto di Informatica e Telematica, Consiglio Nazionale delle Ricerche, Italy)
Lazouski Aliaksandr (Istituto di Informatica e Telematica, Consiglio Nazionale delle Ricerche, Italy)
Martelli Fabio (Istituto di Informatica e Telematica, Consiglio Nazionale delle Ricerche, Italy)
Mori Paolo (Istituto di Informatica e Telematica, Consiglio Nazionale delle Ricerche, Italy)

Chapter 13
Supporting Software Evolution for Open Smart Cards by Security-by-Contract
Dragoni Nicola (Technical University of Denmark, Denmark)
Gadyatskya Olga (University of Trento, Italy)
Massacci Fabio (University of Trento, Italy)

Chapter 14
Sednet:
Houmb Sv Hilde (Secure-NOK AS, Norway)
Ray Indruijt (Colorado State University, USA)
Ray Indrakshi (Colorado State University, USA)

Section 5: Analysis of Risks and Dependability

Chapter 15
Using Model-Driven Risk Analysis in Component-Based Development
Brændeland Gyrd (University of Oslo, Norway)

Chapter 16
Uncertainty Handling in Weighted Dependency Trees:
Omerovic Aida (SINTEF & University of Oslo, Norway)
Karahasanovic Armela (SINTEF & University of Oslo, Norway)
Stolen Keril (SINTEF & University of Oslo, Norway)

Chapter 17
Measuring the Progress of a System Development
Olszewska Marra (Piaśka) (Åbo Akademi University, Finland & Turku Centre for Computer Science (TUCS), Finland)
Waldén Marina (Åbo Akademi University, Finland & Turku Centre for Computer Science (TUCS), Finland)

Chapter 18
Dependability Assessment of Two Network-Supported Automotive Applications
Hamouda Ossama (Université de Toulouse, France)
Kânine Mohamed (Université de Toulouse, France)
Kanou Kanama (Université de Toulouse, France)

Chapter 19
Quantitative Reasoning About Dependability in Event-B
Tarasuk Anton (Åbo Akademi University, Finland & Turku Centre for Computer Science, Finland)
Troubitsyna Elena (Åbo Akademi University, Finland)
Laibinis Linas (Åbo Akademi University, Finland)
Enclosed is check payable to IGI Global in US Dollars, drawn on a US-based bank
