Governments, corporations, individuals, and civic society play essential roles for worldwide growth and development. Management of resources for socioeconomic development of society requires design, development, and implementation of value driven civic engagement processes, practices, and frameworks. These initiatives create an environment of public accountability to distribute benefits of development for the overall benefit of society. IJCESC compiles theoretical and empirical works that significantly contribute to the unexplored field of how bringing social change through civic engagement can enlarge public welfare activities.

Topics Covered:
- Civic engagement and political reforms for development
- Civic engagement for development and social change
- Civic engagement for organization development
- Civic engagement reforms and capacity building
- Leadership cases for civic engagement
- Preservation of natural resources
- Public policy and social change
- Role of administrative competencies for civic engagement
- Smart governance practices
- Smart regulatory frameworks for civic engagement
- Social accountability for individuals, government, and corporate sectors
- Social networks and collaborations for bringing social change
- Standards and benchmarks for civic engagement
- Value-driven civic engagement
