Human-Centered System Design for Electronic Governance

Saqib Saeed (Bahria University Islamabad, Pakistan) and Christopher G. Reddick (University of Texas at San Antonio, USA)

As e-government policies and procedures become widely practiced and implemented, it is apparent that the success of technology in e-government hangs on its consistency with human practices.

Human-Centered System Design for Electronic Governance provides special attention to the most successful practices for implementing e-government technologies. This highly regarded publication highlights the benefits of well designed systems in this field, while investigating the implications of poor practices and designs. This book is beneficial for academics, researchers, government officials, and graduate students interested and involved in design of information systems within the context of e-government.

Topics Covered:
- Digital Divide
- E-Government
- Information and Communication Technologies
- Information Systems Design
- IT Research and Theory
