Technological, Managerial and Organizational Core Competencies: Dynamic Innovation and Sustainable Development

Edited By: Farley Simon Nobre (Federal University of Parana, Brazil), David Walker (University of Birmingham, UK) and Robert J. Harris (The University of Wolverhampton Business School, UK)

Innovation involves a set of processes which support the production and transformation of knowledge into new processes, technologies and products, goods and services, and provide an organization with particular strengths and value relative to other firms. In such a view, innovation is a key source of customer benefits and sustainable competitive advantage.

Technological, Managerial and Organizational Core Competencies: Dynamic Innovation and Sustainable Development investigates the impact of knowledge management, information systems, finance, organizational networks, internationalization, strategic management, marketing, entrepreneurship, and sustainability on an organization that pursues dynamic innovation and sustainable advantage. This book provides research and practice for graduate and undergraduate programs, as well as business firms with different technological, managerial, and organizational perspectives.

Market:
This premier publication is essential for all academic and research library reference collections. It is a crucial tool for academicians, researchers, and practitioners and is ideal for classroom use.

"... it stresses the value to individual business firms of distinguishing themselves from their competitors by offering valuable and unusual products or services. However, economists and business scholars have defined competitive advantages solely in terms of the benefits to individual business firms and without concern for effects on consumers, communities, nations, societies, or humanity in general."
Alan D. Meyer, University of Oregon, USA; and William H. Starbuck, University of Oregon, USA
