InfoSci®-On-Demand

AFFORDABLE | AUTHORITATIVE | COMPREHENSIVE
PAY-PER-VIEW

Full-Text PDF Articles Downloaded
IMMEDIATELY For Only US \$25 Each

Individual Research Articles Available When and Where You Need Them:

- Comprehensive Pay-Per-View Service
- 25,000+ Research Articles
- Written by Prominent International Experts/Scholars
- Precise Search and Retrieval
- Updated With New Articles on a Daily Basis
- Immediate Access to Full-Text PDFs
- No Subscription Needed
- Purchased Research Can Be Stored Locally for Future Use

Materials Available From All IGI Global Research Content:

- Book Chapters
- Journal Articles
- Reference Materials
- Teaching Cases
- Conference Proceedings

The InfoSci®-On-Demand pay-per-view powerful search engine provides users a full range of database search capabilities through “Basic Search”, “Advanced Search”, “Topic Search”, or “Keyword Search” exploration options. Search results will allow users to view descriptive abstracts and complete bibliographical information for every entry. Purchased research can be stored locally for future use.

Abstract
Collaborative e-learning delivers many enhancements to e-learning technology; it enables students to collaborate with each other and improves their learning efficiency. Semantic blog combines semantic Web and blog technology that users can import, export, view, navigate, and query the blog. We developed a semantic course blog for collaborative e-learning. Using our semantic course blog, instructors can import the lecture course. Students can team up for projects, ask questions, mutually discuss problems, take the comments, support answers, and query the blog information. This semantic course blog provided a platform for collaborative e-learning framework. In this chapter, we described some collaborative e-learning and semantic blog technology, and then we introduced functions, implementation and how collaborative e-learning appears in semantic course blog.
