Acknowledgment

During the journey of writing this book, a number of dear friends, colleagues, and relatives have stood by my side and supported me. First and most important of all, I would like to thank my dear friend and colleague Adamantios Koumpis. His continuous support through difficult times, his advice whenever needed, and his encouragement were invaluable. Without Adamantios, this book would never have happened. That is why he was rightfully selected to be the author of the foreword.

During the period of writing this book, there was also another dear and very close friend and colleague who helped with his support in that process. This is Dimitrios Tektonidis, who was always there for me. He believed in me and offered the right opportunities to help me evolve in my professional career all the time. His support and valuable advice was always there, provided with abundance when needed, and that is why I would like to thank him for everything he has done.

This book is all about accessibility and new and emerging technologies. During the last three years, I had the opportunity to be a member of a working group within W3C that is devoted to a similar cause. Having the opportunity to work within the Research and Development Working Group (RDWG) from Web Accessibility Initiative (WAI), to talk with people in that group, listen to their opinions, thoughts, and concerns, and discuss the future of accessibility was a great inspiration for many of the thoughts shared in this book. More particularly, I would like to thank the chair, Simon Harper, and staff contact, Shadi Abou-Zahra.

Another important source of inspiration for the book was my work as a chair of experts team in the European Commission-funded study “Study on Implications from Future ICT Trends on Assistive Technology and Accessibility.” During that period, I had the opportunity to meet a number of experts in the area of accessibility and also work with a group of open-minded and talented persons such as Patrick Crehan and Ioannis Ignatiadis. Mentioning the whole group of accessibility experts would take almost another page, and I am afraid I might forget some people, so suffice it to say that I thank all of them for our conversations and exchange of ideas. Having such minds in the field will guarantee a better future for accessibility.

Last but not least, I would like to thank the closest of all, my family, in particular, my fiancé Margarita, for her help in proofreading parts of the book and my brother, Angelos, for being patient while hearing me explaining ideas and parts of the book. They both were two of my first test subjects in testing out (crazy or not) ideas and thoughts to include in the book, and they deserve acknowledgements for their patience. Moreover, I would also like to thank my parents, Nikolaos and Eleni, who have supported me in all possible ways. Without this support and their selfless love, I would not have succeeded in anything. Finally, I would also like to thank my grandmother, Anthoula, who has secretly been a source of inspiration for some parts of this book.
