Acknowledgment

The process of understanding ICT-supported governance and policy modeling and its implementation on a global scale has brought together the experience and insights of many researchers, consultants, technicians, managers, and scholars worldwide.

In addition to the authors whose excellent contributions provide a well-rounded overview on the foundations, methodologies, approaches, technologies, and use cases, we are very grateful for the comments received from the reviewers and the editorial board. Advice given by our English native speakers Shaun Topham, Dominic Tyreman, and Gay Jonathan during their proofreading has been a great help.

We would also like to express our gratitude to the publication team, who has supported us rapidly and comprehensively.

This book comprises a variety of ideas, collected from conference proceedings, book chapters, articles from journals and newspapers and web based information. All these documents and information have underpinned our research work and conclusions.

The list of those to thank is too numerous; however, we would like to thank our colleagues and counterparts from the FUPOL project, whose participation in discussions and debates helped to shape our way of thinking regarding “Advanced ICT Integration for Governance” and “Policy Modeling.”

Finally we are also very grateful for the full support provided by our organizations namely Cellent AG, Fraunhofer IGD, and Major Cities of Europe.
