Acknowledgment

This book was inspired by teachers and children in classrooms across the world, who have been using tablet computers for educative purposes. Their efforts have sparked our interest in the ways in which these new digital tools can improve learning outcomes and processes, while also transforming schools into more collaborative and engaging learning environments.

To that end, we thank all of the contributors to this book who have shared their research findings, insights, and guidelines. All of this information will surely be of value to many K-12 educators and other researchers. Our gratitude also extends to the reviewers of the book chapters, who have spent countless hours providing feedback.

We also would like to recognize Dr. Candace Burns, Dean of the College of Education, William Paterson University, for her constant support of our endeavors, and to Sharon Leathers, the Executive Project Coordinator of the Garden State Partnership for Teacher Quality Grant, at the College of Education, William Paterson University, who provided us with the initial opportunity to conduct research in schools in the vicinity of William Paterson University.
