Acknowledgment

This edited book resulted from the collaboration of many individuals and the organizations that supported their research and work in the field of engineering education. I take this opportunity to express my gratitude to the people who have been instrumental in the successful completion of this book. I am highly indebted to the authors who responded to the call for proposals, took time and great care in writing their chapters. I would like to thank all the Editorial Advisory Board members for their guidance in shaping the scope of the book and their support particularly in reviewing the technical content of the chapters. The board members’ extensive experiences in both engineering education and industry practice enabled the provision of in-depth feedback and new insights in their reviews of the chapters.

Special thanks to the Chief Editorial Advisory Board member, Dr. Bruce Robert Palmer, for his constant encouragement and patience in the course of conceptualizing and developing this book. Also, it was a distinct honor and privilege to have Dr. David LeRoy Olson (University Emeritus Professor, Colorado School of Mines) who is a highly distinguished faculty, researcher, and engineer, provide a Foreword to this book. I am extremely grateful to the reviewers, including Dr. Elena Brandaleze (Universidad Tecnológica Nacional, Metallurgy Department, Argentina), and thank them for their constructive feedback that enhanced the quality of the contributions to this book. Finally, I would like to acknowledge the invaluable assistance provided by Lyas Ait Tayeb, my research student from the Petroleum Institute, in the various developmental stages of this book.
