The initial ideas for this book came from my participation in two broader projects. First, the Land-grant University Research Ethics (LANGURE) which was funded by NSF and led by faculty from North Carolina State University. The project explored opportunities for research ethics education among the land-grant universities in six states. Following the LANGURE project was another NSF grant—Extend and Assess Research Ethics education (EAREE)—in which I served as the principal investigator and the project director. EAREE engaged the seven doctoral offering institutions in the University of North Carolina system. In addition to the annual report, the final report included a collection of research ethics cases. Given this foundation, it is rather difficult to provide adequate thanks to the individuals who have directly and indirectly helped in shaping my intellectual curiosity in research ethics and practice. I am equally grateful to the other members of the Academy of Management (AOM) ethics committee and the ethicist blog group for continuing to keep the interest and ideas for building an ethical community current through our various webinar and online interactions. They have certainly given me the courage to take on the challenge of editing this book.

In addition to the above organizations and individuals, I owe many thanks to the chapter contributors who responded to the call for proposals, endured the burdens of short deadlines, and served as reviewers for the chapters. Thank you all for bringing your energy, your diverse perspectives, and experiences in research ethics and practice to this volume.

To my long-time mentor and advisor, Dr. Marilyn L. Taylor, and other non-chapter contributors who served as reviewers, I owe a debt of thanks for taking time to review and give great constructive feedback to the authors. You definitely contributed to the quality of the chapters. Also to the IGI-Global editorial staff, Allison McGuinness, Haley Kang, and Caitlyn Martin, who have respectively and at various times in this process responded to both my technical questions and those of the chapter authors whom I had referred to them. My thanks also go to colleagues who are more tech
savvy than I am for their willingness to troubleshoot programs throughout the “down and uploading” processes that came with electronic submission.

Finally, I acknowledge the patience and support of the family who had to help with activities at home during the times I had to work from home. My gratitude to my husband for his insights on the subject, my nephews, Tiwa and Adrian, for typing some drafts, and my children at large for constantly checking up and calling home even when they are busy with their own projects.
