Acknowledgment

I would like to express my warmest thanks to the many colleagues who supported the writing of this handbook, offered comments and assisted in the editing, proofreading and overall design.

My sincere gratitude goes to the chapters’ authors who contributed with their time, knowledge and expertise to the handbook with twenty five well written chapters.

I also wish to acknowledge the valuable contributions of the reviewers who significantly contributed to the improvement of quality, coherence, and content presentation of chapters.

I am grateful to Mr. Austin M. DeMarco, Managing Editor - Editorial Content Department of IGI Global, for his professional support and guidance throughout the publishing process.

I would like to acknowledge the contribution of the members of the Editorial Advisory Board who provided their expertise and knowledge in the area of diagnosis and treatment of chronic diseases.

I would like to thank Mrs. Elena Georga, who is working in her PhD Thesis under my supervision – related to the intelligent systems for monitoring diabetes patients, for enabling me to publish this handbook. She spent many hours reading the chapters and coordinating the collection of material from the chapter authors and reviewers.

Finally, I would like to thank my wife Anastasia and our children, Aikaterini and Ioannis, who encourage me to continue doing research and writing/editing books even I am taking all the time away from them.
