Information and Communication Technologies (ICTs) are wielding an unimaginable influence on global activities, restructuring governance, economy, culture, health, family etc. in nearly all if not countries and regions around the world. Information and communication technologies provide a great development opportunity by contributing to information dissemination, providing an array of communication capabilities, increasing access to knowledge among others. It has been accepted globally by individuals and groups as tool for pursuing their common goals and enhancing their interests. Women in their quest for empowerment and societal recognition have adopted and accepted ICT as an instrument for the advancement and empowerment of women as well as for speedy global mobilization and dissemination of information. Women have long been aware of the power of information and knowledge sharing as a strategy for mobilization and empowerment. But does acceptance translate into utilization?

Has the embrace and acceptance of ICT as a facilitating tool delivered in the empowerment drive by women across the globe? How are women utilizing the supposedly enormous opportunities of ICT for empowerment? What is the access status? What are the impacts? Are there challenges and strides? Has there been an enhanced visibility of woman in Socio-political, cultural, economic landscapes as a result of the utilization of ICT? What changes have ICT utilization generated among women globally?

This book provides answers to these questions from various perspective and gives an insight into several ICT-related issues affecting women in different ways. Each of the fifteen chapters is a pleasant read, providing interesting account of the unknown ICT-world of women across continents.
