Absolute certainty is a privilege of uneducated minds and fanatics. It is, for scientific folk, an unattainable ideal. – Cassius J. Keyser (1862-1947), American mathematician

The co-editors thank the four authors who support this handbook with the forewords based on their expertise. They made the spirit of the handbook clear, in a few words with respect to the values that guided the project at the very beginning. Our gratitude is also directed to the authors involved in this common adventure with a chapter proposal and/or a reviewing act. In the same way, thanks go to all reviewers as their rigor to check contents with the double blind process allowed a robust selection of the chapters in the scope of the handbook and gave the authors many ways of improvement. But this handbook’s challenge points out the non-variable key factors to design, develop and guide efficient training in Higher Education, adapting to the local context, would not have been possible without the experts, trainers, administrative staff and the students, learners and apprentices met during the course of more than fifteen years by the co-editors during their professional career at the University or in close relationship with the industrial world. Aware of common goals and dialogic needs and constraints, they help us to drive the change in our behavior and organization, improving our guiding of learners at school and in the workplace. Our common adventure with the IESP training team, mentors and tutors through the years also requires our gratitude. A Work Integrated Learning that evolved and was submitted to tremendous changes. All colleagues have involved themselves to develop the WIL model of the department and maintain quality, respecting the inner value (co-design of requirement specification) through the years. They gave their skill and abilities. Within brainstorming, observation, proposition, experimentation, feedback and feed forward, they finally stressed the good practices of WIL and apprenticeship. Today a new step is achieved, helping the training organization to face today’s issues: mobility of learners, sustainable development and entrepreneurship. Looking back, the co-editors are convinced that collective upstream design with partners based on factual approach is one clue that drives towards Excellence, respecting each party around an acceptable compromise; as in the agile methods of development, customers are part of the process. Our special thanks go to learners, graduates and our industrial partners; they believed in our model, urged its evolution and supported our pedagogical innovation in a state incentive context as European guideline. Thanks to all without whom this adventure could not have been made possible respecting the mottos: staff first and client second in the spirit of Nayar (2010), changing the management for the benefit of all; i.e. striving for excellence in trainings and training organizations.
