Acknowledgment

This book is based on our lifelong experience of developing gaseous detectors. During all these years we have had the opportunity to meet and work with a large number of very skilled and fascinating persons with a common interest in gaseous detectors of all kinds.

We hope that this book reflects the hard work and interesting discoveries made by all these persons. We are grateful for all the knowledge they have shared with us and the memorable moments we have had together at various research centers; CERN, Fermilab, P.L. Kapitza Laboratory, New Mexico State University, Royal Institute of Technology, Université de Strasbourg and many other interesting and creative scientific environments.

We would like to take the chance to specially thank some of those who have supported and encouraged us through the years: David Anderson, Amos Breskin, Per Carlson, Paolo Fonte, Robert Golden, Paolo Martinengo, Antonio Di Mauro, Eugenio Nappi, Anton Oed, Panagiotis Pavlopulos, Paulo Pichichi, Fabio Pietropaolo, Francois Piuz, Fabio Sauli, Jacques Séguinot, Steve Stochaj, Thomas Ypsilantis, Antonio Zichichi and many others.

None of the work would have been possible without the professional hands of Michel Bosteels, André Braem, Jacob van Beelen, Roger Bouclier, Eric David, Bob Hull, Daniel Lacroix, Rui de Oliveira, Roy Park, Miranda van Stenis, and many more of the skilled engineers.

Finally, we are especially grateful to Martin Suffert and Georges Charpak who introduced and trained us to the world of light, gases and electric fields.
