The Internet has not only transformed the way of doing business, but it has also enabled the transformation of government and democratic processes. E-government uses information and telecommunication technologies to facilitate the daily administration of government and provide better services to citizens, businesses, and other government agents. For citizens, e-government empowers them to actively participate in the democratic institutions and political processes. 

This book is on *E-Government Strategies and Implementations*. The book consists of 18 chapters. All the chapters have undergone a thorough review process and extensive revisions. These chapters are grouped into two sections. The first section is on “E-Government Strategies, Concepts, and Issues”. The second section is on “E-Government Implementations and Practices”.
