Acknowledgment

The editors would like to sincerely acknowledge the unflinching support of all individuals involved in the collation and review process of the book’s chapters, without whose support the project could not have been satisfactorily completed. However, some of the authors of chapters not included in this book also served as referees for included chapters. Thanks go to all those reviewers for their constructive and comprehensive reviews.

Special thanks also go to all the staff at IGI Global, whose contributions throughout the whole process from inception of the initial idea to final publication have been invaluable. In particular, we wish to extend our sincere gratitude to Kristin Roth, with whom we started this project, and Ross Miller, who collaborated with us to final publication. Their cooperation in the support and development aspects of this book has been outstanding.

In closing, we want to thank the research teams of the PLaSE lab (http://plase.csd.auth.gr/) and the Software Engineering Group (http://sweng.csd.auth.gr/) for the provision of facilities and moral support which make this work possible, the Department of State of Education of The Gambia and the Greek State Scholarships Foundation (IKY) for their support. This work was partially funded by the European Community’s Sixth Framework Programme under the contract IST-2005-033331 “Software Quality Observatory for Open Source Software” (SQO-OSS) (http://www.sqo-oss.eu). Our final thanks go to the software developers and users, researchers, and all proponents in the free/open source community for making this emerging software development methodology happen and ubiquitous in the future.
