Acknowledgment

Editing a handbook is a hard but compensating and enriching task, involving a wide scope of different activities, such as maintaining close contact with the authors and reviewers, exchanging ideas and experiences, organizing and integrating contents, and many others, with the goal of creating a product that adds value to what the market already has to offer, while simultaneously meeting the public expectations. Not surprisingly, this task cannot be accomplished without significant help and assistance from many sources. The editors would like to acknowledge the support, time, and belief of all who contributed to make this work possible.

First of all, this handbook would not have been possible without the ongoing professional support of the team of professionals of IGI-Global. We are most grateful to Dr. Mehdi Khosrow-Pour and to Ms. Jan Travers for the opportunity. A very special word of gratitude and recognition is due to the excellent editorial assistants Ms. Rebecca Beistline and Ms. Christine Bubon, for their professional guidance and friendly suggestions, encouragement and prompt help. Special thanks go also to all the staff at IGI-Global, for their valuable contributions throughout the process of making this handbook available all over the world.

To the Members of the Editorial Board, our gratitude for sharing with us their knowledge and experience in the support of the decision-making processes inherent to the project, for assisting in the review process, and for their help in shaping the handbook.

We acknowledge all authors for their insights and excellent contributions to this handbook. Also, we are grateful to the authors who simultaneously played the role of referees for chapters written by other authors, as well as to the external reviewers who promptly volunteered to participate in the peer-review process. The authors and reviewers are truly the soul of this handbook! The communication and exchange of ideas and perspectives within this global group of recognized individuals, both from the academic and industrial worlds, was an enriching experience for us.

We also acknowledge all who submitted contributions that did not make the final version of this book, and regret that despite their effort and scientific merit, we were unfortunately not able to include many interesting chapters due to different constraints.

A special thank to our institution, the Polytechnic Institute of Câvado and Ave, for providing the infrastructure, material resources, and logistics required for our work.

Thank you.

The Editors,

Maria Manuela Cruz-Cunha
António José Tavares
Ricardo Simões
