Acknowledgment

First, special thanks go to the authors of the 27 chapters comprising this edited book. We especially thank them for their support and encouragement through the writing and publishing process and their interest in this effort. They were an inspiration to us as we carried out our research. This work is a reflection of their vision in guiding our collaboration.

Sincere gratitude is extended to Julia Mosemann for her editorial efforts, her style, but most importantly, her unwavering sense of humor. Special appreciation goes to Brian Bryant, for his support, encouragement, and inspiration. He taught us how to turn water into wine.

Finally, we are grateful to our all of our research collaborators who donated their time and expertise in this publication. “Thank You.”
