Tables and Figures

Tables

Chapter 1
Table 1. Workplace e-learning as a ‘distant’ education ................................................................. 7
Table 2. Understanding social change through culture, learning, and technology .................. 10
Table 3. Workplace e-learning: Social change and social responsibility ................................. 17

Chapter 2
Table 1. Emerging workplace forms and their value propositions ............................................. 27
Table 2. Emerging workplace forms and their organizational structures ................................. 31
Table 3. Emerging workplace forms and their normalization imperatives ............................... 35

Chapter 3
Table 1. Universalized workplace education from workplace e-learning: A two-way comparison... 47
Table 2. Universalized workplace education from workplace e-learning: A three-way comparison... 54

Chapter 4
Table 1. ............................................................................................................................................ 79
Table 2. ............................................................................................................................................ 79
Table 3. ............................................................................................................................................ 80
Table 4. ............................................................................................................................................ 80
Table 5. ............................................................................................................................................ 80
Table 6. ............................................................................................................................................ 81

Chapter 5
Table 1. Presumption of neutrality and the innovative artefact .................................................... 97
Table 2. Social (re)shaping of workplace e-learning ................................................................. 101
Table 3. Social (re)shaping of workplace e-learning and the infallibility paradox .................... 103

Chapter 6
Table 1. Knowledge-based economy and commodified knowledges ........................................ 111
Table 2. Knowledge management apparatuses and business process reengineering for commodified knowledges ................................................................. 121
Table 3. Social (re)shaping of workplace e-learning for commodified knowledges .................. 123
Chapter 7
Table 1. Workplace e-learning industry: Trends, strategies, and foci .................................................. 138

Chapter 8
Table 1. Social rationalism and formal bias embedded in workplace e-learning artefacts .................. 149
Table 2. Technological artefacts of workplace e-learning: Formal bias and structuring media.............. 156
Table 3. Technological artefacts of workplace e-learning: Formal bias, structuring media, and alienation ......................................................................................................................... 161

Chapter 9
Table 1. ICTs, knowledge, and commodification .................................................................................. 172
Table 2. Knowledge management, dehumanization, and the primacy of commodified knowledges ................................................................................................................................. 180
Table 3. Ideologies of technological artefacts of workplace e-learning ................................................ 181
Table 4. Dehumanization by technological artefacts of workplace e-learning ..................................... 183

Chapter 10
Table 1. Homogenizing, normalization, and contingency at work ...................................................... 190
Table 2. Homogenizing, normalization, and alienation at work ........................................................... 194

Figures

Chapter 1
Figure 1. Workplace e-learning as a technological or financial artefact is primarily perceived as a sensate object; a mechanism, device, or a thing; as a technological, institutional, and/or instructional artefact. Technological or financial artefactual research and study supporting this perception focus on technological proficiencies and financial efficiencies, resulting in a workplace e-learning that is educationally universalized and organizationally normalizing ......................................................................................................................... 13
Figure 2. Workplace e-learning conceived as a fluid, socio-cultural idea. Socio-cultural research and study of workplace e-learning must possess the capacity to recognize social changes in society and the social responsibilities that emerge as part of that society’s (workplace) adult education and training to be relevant, meaningful, and applicable, to a global cohort of adult learners. Notice that the interface is also generalized to represent all ICTs that may contribute to workplace e-learning. ................................................................. 15

Chapter 2
Figure 1. Flexibility in customer responsiveness requires a structural organizational capability to disaggregate, favouring the virtual form over the network form of workplace design. The modular form balances disaggregation and reaggregation; and, flexibility in customer responsiveness with the capacity for innovation ......................................................... 28
Figure 2. Capacity for innovation requires a structural organizational capability to reaggregate, thus favouring the network form over the virtual form of workplace design. The modular form balances disaggregation and reaggregation; and, flexibility in customer responsiveness with the capacity for innovation.

Figure 3. The normalization of work happens within workplaces from two directions: the outside-in (‘rule and competence’ convergence in response to capacity for innovation); and, the inside-out (‘role and skill’ informationalization in response to flexibility in customer responsiveness).

Chapter 4
Figure 1. A macro view of the socio-cultural sensitivity taxonomy and its four elements: (a) social change and social responsibility; (b) normative learning; (c) universalized education; and, (d) socio-cultural insensitivity.

Figure 2. Dominant paradigms, socio-cultural perspectives, as well as critical workplace e-learning scenarios, all bring to light the socio-cultural impacts from socio-culturally insensitive, technological artefactual approaches to workplace e-learning research and study.

Chapter 5
Figure 1. Five decades of ICT innovation alongside business administration process change within organizations.

Figure 2. Five decades of ICT innovation alongside workplace e-learning for workplace adult education and training as part of both ICT innovation and business administration process change within organizations.

Figure 3. Five decades of ICT innovation alongside workplace e-learning for workplace adult education and training as part of both ICT innovation and business administration process change within organizations. The shifting foci of workplace e-learning are highlighted.

Chapter 7
Figure 1. A cultural instrumentalization of workplace e-learning establishes equilibrium and brings about culture change, in response to workforce resistance to periodic ICT innovation and business process change.

Chapter 10
Figure 1. Matrix of social integration, which brings together the pedagogies of a universalized workplace e-learning with the homogenization of a normative learning for normalized work.
