Environmental Information Systems in Industry and Public Administration

Table of Contents

Section I - Introduction to Environmental Information Systems
Chapter 1 -Environmental Informatics—Methods, Tools and Applications in Environmental Information Processing ...... 2
  Bernd Page, University of Hamburg
  Claus Rautenstrauch, Otto-von-Guericke University Magdeburg

Section II - Methodical Foundations
Chapter II-Cognitive Aspects on the Representation of Dynamic Environmental Phenomena Using Animations .................... 13
  Patrick J. Ogao, Connie Blok
  International Institute for Aerospace Surveys and Earth Sciences

Chapter III-3D Modelling of Urban Environment:
  Data Collection Techniques ..................................................... 25
  Eberhard Gülch, Inpho GmbH

Chapter IV-Using Environmental Information Efficiently:
  Sharing Data and Knowledge from Heterogeneous Sources .................................................. 41
  Ubbo Visser, Heiner Stuckenschmidt, Holger Wache, and Thomas Vögele, University of Bremen

Section III - Global and Multinational Environmental Information Systems
Chapter V-Environmental Monitoring and Management of Protected Areas through Integrated Ecological Information Systems – An EU Perspective......................... 75
  Thomas Blaschke, University of Salzburg

Chapter VI- A Structured Basket of Models for Global Change .......................................................... 101
  Gilbert Ahamer, Federal Environment Agency, Vienna
Section IV - Air, Water and Soil
Chapter VII - FLADIS – a GIS Based System for Extending Air Pollution Point Data to Continuous Spatial Information ........................................................................................................ 138
  Goetz Wiegand and Volker Diegmann
  IVU Umwelt GmbH

Chapter VIII - Assessing the Impacts of Land Use Policy on Soil Erosion Risk: Possibilities and Constraints of Geographical Information Systems ........................................ 146
  A. Van Rompaey, K. Van Oost and G. Govers
  Laboratory for Experimental Geomorphology

Section V - Urban and Landscape Development
Chapter IX - Land Evaluation - An Artificial Intelligence Approach ........................................................................................................ 158
  G. Tsoumakas and I. Vlahavas
  Aristotle University of Thessaloniki

Chapter X - A General Modelling and Simulation System for Sustainability Impact Assessment in the Field of Traffic and Logistics ................................................................. 167
  Lorenz M. Hilty, Swiss Federal Laboratories for Materials Testing and Research
  Ruth Meyer, University of Hamburg
  Thomas F. Ruddy, Solothurn University of Applied Sciences

Chapter XI - Explorative Data Analysis Support for Environmental Epidemiology ................................................................. 186
  Vera Kamp, University of Oldenburg

Section VI - Waste Management and Logistics
Chapter XII - GIS Application for Detection of Ecological Risk Zones ........................................................................................................ 198
  Victor P. Belogurov, Ukrainian Scientific and Research Institute of Ecological Problems

Chapter XIII - Innovative Control Methods in Waste Management ........................................................................................................ 206
  Hubert B. Keller, Bernd Müller and Andreas Fick
  Forschungszentrum Karlsruhe GmbH
Chapter XIV - Estimation of Amounts of Waste Generated from Healthcare Facilities ...................................................... 215
Mohamad K. Kayyal, Damascus University

Chapter XV - Spatial Monitoring and Routing System for the Transportation of Hazardous Materials .................. 227
Azedine Boulmakoul, Techniques de Mohammedia
Robert Laurini, INSA de Lyon
K. Zeitouni, Universite de Versailles Saint-Quentin-en-Yvelines

Section VII - Prevention and Management of Environmental Hazards
Chapter XVI - High Performance Computing, Simulation and Forest Fires ................................................................. 238
E. Luque, University Autonoma of Barcelona

Chapter XVII - Modelling and Simulation of Environmental Hazards ........................................................................ 250
Nick A. Theophilopoulos and Pavlos Kassomenos
IMPETUS Engineering S.A.

Chapter XVIII - Toward a “Virtual Laboratory” to Support Forest Fire Behaviour Modelling and Metrology .......... 271
F. Guarnieri, S. Olampi, Ecole des Mines de Paris
A. Napoli, Space Applications Institute

Section VIII - Metadata and Environmental Reporting
Chapter XIX - Metadata Information Systems for Geospatial Data .............................................................................. 283
Stefan Göbel and Uwe Jasnoch
Fraunhofer Institute for Computer Graphics

Chapter XX - Meta Information System for Environmental Chemicals: Set-up and Analysis of its Contents .......... 297
Kristina Voigt and Gerhard Welzl, National Research Center for Environment and Health
Joachim Benz, University of Kassel

Chapter XXI - Metadata-Supported Automated Ecological Modelling ........................................................................ 313
Virginia Brilhante and Dave Robertson
University of Edinburgh
