Acknowledgment

It is our great pleasure to comment on the hard work and support of many people who have been involved in the development of this book. It is always a major undertaking but most importantly, a great encouragement and somehow a reward and an honor when seeing the enthusiasm and eagerness of people willing to advance their discipline by taking the commitment to share their experiences, ideas and visions towards the evolvement of a collaboration like the achievement of this book. Without their support the book could not have been satisfactory completed.

First and foremost, we wish to thank all the authors who, as distinguished scientists despite busy schedules, devoted so much of their time preparing and writing their chapters, and responding to numerous comments and suggestions made from the Editorial Advisory Board, the reviewers and ourselves. We trust this collection of chapters will offer a solid overview of current thinking on these areas and it is expected that the book will be a valuable source of stimulation and inspiration to all those who have or will have an interest in these fields.

Our sincere thanks go to Professor Efthymios Lekkas, National and Kapodistrian University of Athens, who wrote the foreword and to all the members of the Editorial Advisory Board who provided excellent comments, expert help and continuous support. These are some of the very same people who are creating these scientific changes. We have been fortunate that the following have honored us with their assistance in this project: Dr Steve Bloomer, Faculty of Engineering & Technology, University of Teesside; Dr Andre Clark, University of Glamorgan, Business School; Professor Angus Duncan, University of Bedfordshire, Institute for Applied Natural Sciences; Dr Stathis Hadjiefthymiades, Department of Informatics and Telecommunications, University of Athens; Professor Fuad Mallick, BRAC University, Bangladesh and Kathmandu University; Dr Ralf Steinberger, Joint Research Centre of the European Commission Institute for the Protection and Security of the Citizen Global Security and Crisis Management Unit; Dr Tim Thompson, Teesside University, School of Science & Technology. Special gratitude also goes to all the reviewers for their most critical comments.

Last but not least, we wish to gratefully acknowledge that we were fortunate to work closely with an outstanding team at IGI Global. Elizabeth Arder, Kristin M. Klinger, Jamie Snavely and Jan Travers were everything someone should expect from a publisher: professional, efficient and a delight to work with. Thanks are also extended to all those at IGI Global who have taken care with managing the design and the timely production of this book.
Finally, we are deeply indebted to our family for their love, patience and support throughout this rewarding experience.
