Acknowledgment

With great pleasure, the time has come to write this page.

First, sincere thanks should go to the other 32 authors, coming from 16 countries and regions (9 from Asia, 18 from Europe, 2 from North America, and 3 from Oceania). They have made great contributions to this project, such as promptly submitting own chapters with their domain knowledge and research results, as well as carefully reviewing others’ chapters for the quality and also the readability and coherence of this book.

IGI Global has provided excellent assistance and guidance along with this project. Special gratitude goes to editors Elizabeth Ardner and Dave DeRicco for their valuable communication and suggestion throughout the development process.

I wish to thank the support made by National Nature Science Foundation of China under grant NNSF-60872084 in providing a comfortable environment for enjoyable scientific works.

Last, but not least, I am indebted to my wife, my daughter and my parents for their encouragement, support, patience, tolerance and understanding during the last two years.
