Acknowledgment

Heart-felt thanks to Professor Karl H. Pribram for numerous very valuable comments and suggestions after reading various versions of the manuscript more carefully than one might expect from a pioneering and internationally-leading scientist of intense and world-wide activity. The first author benefited also very much during days of intensive discussions while he was enjoying warm hospitality of Prof. Pribram and wife Mrs. Katherine Neville in Georgetown, DC, but also during other meetings in Ljubljana and at conferences.

Finally, special thanks to Professors Horst Bischof and Franz Leberl, Drs. Friedrich Fraundorfer, Roland Perko, and to other researchers of the Institute for Computer Vision and Graphics of the Graz University of Technology, Graz, Austria, for collaboration and support during M.P.’s Marie Curie post-doc fellowship, contract HPMF-CT-2002-01808, funded by the European Commission. Applications were tested in this framework.

Support of Slovenian institutions – the BION Institute, the Ministry of Education, Science and Sports, and the National Institute of Chemistry (especially its former director Prof. S. Pejovnik) – is gratefully acknowledged. Thanks for support from Multimedia University, eScienceFund funded by Ministry of Science, Technology & Innovation, Malaysia and Mr. Nuo Wi Tay for the computer simulations in this book.
