Acknowledgment

We would like to thank all contributing authors for their strong submissions and timely preparations of book materials. Their dedication and contribution are essential to the success of the book.

We would like to thank all Editorial Advisory Board (EAB) members and reviewers for reviewing the book chapters. Their thorough evaluation and constructive suggestions are invaluable to the authors for preparing high quality chapters.

In addition, many EAB members also provided instrumental guidance and support during the development of the book. We would like to thank Russell Schwartz, Jason McDermott, Limsoon Wong, Zhaolei Zhang, Yu (Brandon) Xia, Haijun Gong, Esko Ukkonen, Jerzy Tiuryn, and Igor Jurisica, for their detailed suggestions and patient help regarding the design of chapter evaluation form as well as the preparation and organization of the book materials.

We would especially like to thank the following EAB members who have helped edit and proofread the book chapters shown in parentheses:

- **Tatsuya Akutsu** (Structural Alignment of RNAs with Pseudoknots)
- **Todor Dudev** (Finding Attractors on a Folding Energy Landscape; Structural Alignment of RNAs with Pseudoknots)
- **Thomas Manke** (Systems Biology-based Approaches Applied to Vaccine Development)
- **Jason McDermott** (Using Systems Biology Approaches to Predict New Players in the Innate Immune; System Granger causality: Its foundation and applications in systems biology)
- **Victoria Petri** (Modules in Biological Networks: Identification and Application)
- **Dennis R. Salahub** (Computational methods for identification of novel secondary metabolite biosynthetic pathways by genome analysis; A multiscale computational model of chemotactic axon guidance)
- **Alexander Schoenhuth** (Network-driven Analysis Methods and their Application to Drug Discovery; Connecting Microbial Population Genetics with Microbial Pathogenesis: Engineering Microfluidic Cell Arrays for High-throughput Interrogation of Host-Pathogen Interaction)
- **Russell Schwartz** (Mechanical models of cell adhesion incorporating nonlinear behavior and stochastic rupture of the bonds: concepts and preliminary results)
- **Fengzhu Sun** (Addressing the Challenges of Detecting Epistasis in Genome-Wide Association Studies of Common Human Diseases Using Biological Expert Knowledge)
- **Jerzy Tiuryn** (Biclustering of DNA Microarray Data: Theory, Evaluation, and Applications)
- **Jack Tuszyński** (Visualization of Protein 3D Structures in ‘Double-Centroid’ Reduced Representation: Application to Ligand Binding Site Modeling and Screening)
• **Esko Ukkonen** (Modules in Biological Networks: Identification and Application)
• **Lusheng Wang** (Biclustering of DNA Microarray Data: Theory, Evaluation, and Applications)
• **Yu (Brandon) Xia** (Current Omics Technologies in Biomarker Discovery; Linking interactome to disease: a network-based analysis of metastatic relapse in breast cancer; Cancer and Signaling Pathway Deregulation)
• **Zhaolei Zhang** (Prediction of epigenetic target sites by using genomic DNA sequence; Single nucleotide polymorphism and its application in mapping loci involved in developing human diseases and traits)
• **Xianghong Jasmine Zhou** (Unsupervised methods to identify cellular signaling networks from perturbation data)

We would like to thank the IGI Global for giving us the opportunity for developing this book. We would especially like to thank our book development coordinator, Christine Bufton, for her tireless and prompt assistance and guidance.

Last but not least, we would like to thank our family members for their patience, understanding and support throughout the book development process.

August, 2010
