Acknowledgment

The decision to pull together an edited book on this topic came after several years of collaboration on the topics of virtual and distributed teams with many individuals in my professional and academic life. For that reason, I would like to acknowledge not only the individuals who helped me with the book project, but those who influenced me to the point of realizing how badly a book like this is needed.

My first experience with teaching in higher education was at Portland State University in the Oregon Master of Software Engineering (OMSE) program. Throughout my years with that program, Dr. Kal Toth has been a great help in stretching my thinking regarding both teaching and working in the distributed environment. Kal and I came to the conclusion that a distributed team collaboration course was needed in the program, and proceeded to co-design that course. It was during many hours of collaboration and many cups of coffee at The Hof that we came to the realization that the book we wanted to use in this course did not exist. Further, we realized that no single person could write this book, due to the emerging nature of the topic and the research to support it. Thus, we arrived at the decision to pull together and edit a book that would bring together collaborators in academia and industry. Thank you to Kal and to the students and faculty in the OMSE program for the experiences and encouragement that made this book possible.

To my colleagues at George Fox University, I would like to extend appreciation for mentoring me as I transitioned from practitioner to scholar and strove to find the balance between the two. A special thank you to Dr. Craig Johnson and Dr. Tim Rahschulte for their encouragement and for challenging me during the years leading up to this book.

I would also like to acknowledge my colleagues and students at City University of Seattle, where I spent three years working remotely myself while leading a group of distributed teaching faculty. This work would not have been possible without the support of Dr. Kurt Kirstein, the Dean of the School of Management, who believed in me and supported me as I led my own distributed team. A special thank you also to all of the students in the MS in Project Management and Technology Management programs, who provided inspiration by exposing me to the real-world challenges they were facing in their organizations and teams.

Thank you also to several colleagues who helped me think about these topics, and provided peer reviews as the chapters were being written: Mark Bowles, Ann Marie Lei, Boyd Smith, Gordon Whitehead, and Julie Wiebell.
And most importantly, thank you to my family, Mark, Gina, Nick, and Robyn, who put up with me through all the months when I was focused on my research and this book. Their support was a constant throughout this project and so many others and I am truly blessed to have had their encouragement when it was needed, as well as the reminder from time to time that I was needed elsewhere. Thank you to the four of you for keeping me in balance.
