The editors would like to acknowledge the contribution and effort of everybody involved in the writing, review, and production process of the book. We wish to thank the authors of each chapter for contributing the results of their work and enriching our knowledge related to modern software engineering topics.

We are also very grateful for the professional advice received from the members of the editorial board, in particular, Prof. Dr. Mehmet Aksit of the University of Twente, Prof. Dr. Fevzi Belli of the University of Paderborn, Prof. Dr. Jorge Cardoso of the University of Coimbra, Prof. Dr. Bernd Kraemer of the FernUniversität in Hagen, Prof. Dr. York Sure of the University of Koblenz, Prof. Dr. Murat Tanik of the University of Alabama, and Prof. Dr. Bedir Tekinerdogan of Bilkent University.

Most of the authors in this book served as reviewers, and so deserve a special “thank you.” In addition, several external reviewers helped with the double-blind review of all chapters. Their dedication and willingness while working with very tight deadlines and short turnarounds contributed a lot to increase the quality of the work. Thanks go to all who provided comprehensive and constructive reviews.

Special thanks go to the publishing team at IGI Global, whose contributions throughout the whole process, from the commencement of initial idea to final publication, were precious. We would like to thank Joel Gamon, our development editor, for his unwavering assistance and support; Kristin Klinger, Jan Travers and Erika Carter for their invaluable thoughts in the development of initial idea and their confidence in this book. Their timely guidance and reminders have been instrumental in completing such a long and demanding project.

The editors also need to acknowledge with gratitude the support received from our respective institutions, Middle East Technical University and FZI Research Center for Information Technology, and from the THESEUS/TEXO research project. We are grateful to find the opportunity to complete the editorial task of putting this book together among our other daily duties of work. As such, the support and encouragement we receive for this project is greatly appreciated.

Finally, we would like to dedicate our efforts to our families. Without their patience and understanding, it may never be possible to reach a happy end in such a long journey.
