The authors wish to thank the Australian Learning and Teaching Council (ALTC) for awarding an ALTC Competitive Grant for this project and casebook. Without their support, this important project and book would not be possible.

The authors also wish to thank participating and non-participating staff in Physics, Chemistry and Biology in the five institutions for their support in the lead up to the development of the activities for this project and during their implementation. It has been rewarding that a number of the activities developed have continued to be used and developed further. Thanks are also due to the students that provided useful feedback to us and helped to improve the material that we developed.

Particular thanks are due to Mr. Bryce Lockhart-Gillett who did a fantastic job in writing many of the Concept Tests and VotApedia questions for the whole first year program in Chemistry at the University of Tasmania, Hobart. Bryce’s familiarity with the unit material through private student tutoring and laboratory demonstrating was very helpful for his efficient completion of this large task that had seemingly endless rolling deadlines throughout 2008. But, more than anything, his deep understanding of the material and the goals of the Australian Learning and Teaching Council project, and good communication with the topic lecturers and project investigators led to an excellent set of materials having been developed. Similarly, thanks are due to the tutors who participated enthusiastically in implementing the language based strategies at the University of Sydney. Without their hard work and support, the project could not have been completed satisfactorily. Team members of the ALIUS Australian Learning and Teaching Council project are also to be thanked in connect with some of the strategies from that project that meshed very well with the language support focus of this project.

We authors pay great appreciation to Dr Felicia Zhang for the numerous visits that she made to Hobart, Sydney, and Newcastle that really helped to open our eyes to some of the language-based issues facing students, developing some starter materials that got us on track, proofing many of our lecture materials for language based vagueness that we had been completely blind too and keeping on top of the grant requirements.

Special thanks go to the publishing team at IGI Global, whose contributions throughout the whole process, from inception of the initial idea through to final publication, were invaluable. In particular, we would like to thank the managing development editor Hannah Abelbeck, who helped keep the book on schedule and who gave valuable and timely assistance with detailed advice.

The authors also need to acknowledge with gratitude the encouragement, patience and understanding of our partners and family members for making sacrifices in order to leave us with the time and energy to complete the book.
In closing, we trust that our readers will find themselves on an exciting journey of learning as they make their way through this casebook.
