Acknowledgment

A large number of institutions and individuals have been involved in making this book happen. The book was conceived during the COGAIN (Communication by Gaze Interaction) project (IST-2003-511598), a Network of Excellence funded by the European Commission in 2004–2009. Much of the content of this book is based on the research articles, technical reports and deliverables produced during the project.

Research institutions, user organizations, eye tracking manufacturers and assistive technology companies have all facilitated the work in one way or the other. The project had 27 official partners representing the different stakeholders:

- University of Tampere, Finland (coordinator)
- Czech Technical University, Czech Republic
- Bispebjerg Hospital, Denmark
- Danish Centre for Technical Aids for Rehabilitation and Education, Denmark
- Danmarks Tekniske Universitet, Denmark
- IT University of Copenhagen, Denmark
- Risø National Laboratory, Denmark
- Metrovision, France
- Technische Universität Dresden, Germany
- University of Koblenz-Landau, Germany
- University of Lübeck, Germany
- Hewlett Packard Italy, Italy
- Politecnico di Torino, Italy
- Tokyo Institute of Technology, Japan
- Siauliu University, Lithuania
- The Public University of Navarre, Spain
- DART Communication and Data Resource Center, Sweden
- Permobil AB, Sweden
- Tobii Technology AB, Sweden
- University of Zürich, Switzerland
- ACE Centre Advisory Trust, UK
- De Montfort University, UK
- Loughborough University, UK
- University of Cambridge, UK
In addition to EC funding, the work was supported by several research projects as well as core funding coming from the participating universities and industry. Their contributions are gratefully acknowledged.

Many other institutions participated in the work of the project in advisory bodies, including the Board of Industrial Advisors and the Board of User Communities. Altogether hundreds of individuals contributed to the work of the project through its yearly camps, research retreats, workshops, and deliverables. There are too many individuals involved to name each one here; we are grateful to every one of them for carrying the project through, and for their contributions to its operation and, directly or indirectly, to this book.

Managing a project of such a wide scope is no easy task. The link to the European Commission was the coordinator, Kari-Jouko Räihä. The day-to-day operation was in the competent hands of Stina Boedeker (communications officer) and Päivi Majaranta (scientific officer). In addition to managing the regular reporting and monitoring the work done in the work packages, they tirelessly participated in numerous exhibitions and other dissemination events. The strategic decisions were in effect done by the Steering Board, which for the last three years of the project consisted of the following active participants: Fulvio Corno, Gintautas Daunys, Mick Donegan, Bjarne Ersbøll, John Paulin Hansen, Howell Istance, Fiona Mulvey, Kari-Jouko Räihä (chair), Olga Štěpánková, and Arantxa Villanueva. Thank you all, again.

We would like to express our special, sincere thanks to the members of the user community and to those supporting them. They have been kind enough both to be involved in the project, to provide their valuable insight in all phases of the project, and to give their permission to be used as case studies in this book in order to help others. Without the feedback from the actual end users of the eye control technology, all the information in this book would be only academic and of little practical importance. A very special thanks to Sarah Yeo and Kati Lepistö, who cheerfully shared their experiences through the project Web page and literally gave the project a face.

We would also like to thank the many manufacturers of eye gaze systems, from Europe, America and beyond, who generously gave their time and support in many ways, including equipment loans, involvement in exhibitions, contributions at COGAIN meetings and collaboration in our work related to eye gaze safety.

The COGAIN project ended in August 2009. However, the work continues in the form of an association, with Bjarne Ersbøll serving as its first President. In fact, potential royalties of this book will go to the COGAIN Association – a warm thanks to all authors of the book chapters for this and, of course, for the effort they have put in preparing their contributions. We hope this book will serve as impetus for you, the reader, to get involved in the work of the Association: it relies on the continued efforts of individuals volunteering their time. For information on the Association, see www.cogain.org.

Special thanks go also to the publishing team at IGI Global. In particular, we wish to thank Christine Bufton and Hannah Abelbeck for guiding us step by step through this publishing process and for kindly replying to our numerous questions.

We also thank the anonymous reviewers (organised by the publisher) for their constructive comments and ideas for improvements that contributed to the coherence and quality of the book.
Detlev Droegge, from the University of Koblenz-Landau, Germany, deserves special thanks for creating a dedicated shared space for the manuscript and for assisting in editing Section 6 of the book. We also thank Diako Mardanbegi from IT University of Copenhagen, Denmark, for his assistance in converting the contributions from LaTeX to Microsoft Word and fine tuning the layout.

Proofreading and language revision of the book chapters was conducted within a very tight schedule by Translatum Oy, Finland.
