Acknowledgment

The authors are the ones who create a text. The ideas originate with them. Further, they conduct the research and the analyses; they write the actual chapters; they go through a rigorous (sometimes grueling) process of peer evaluation. Theirs is the hard work that results in learning value to others and that inform the practices in the field. For the application of self-discovery learning methods to the design of online sites, these authors are engaging a fresh topic with innovative approaches. First, I would like to acknowledge and thank each of the contributors to this text for their hard-won insights and professional camaraderie.

Plenty of publishing often occurs in a domain field before the possibility of a book arises. In this situation, it was no different. Various professional journals served as incubators of ideas. Their staffs—the editors and reviewers—also offered the support and healthy critique necessary to evolve relevant work. The idea for this text really started in late 2008, with the publication of “Scaffolding Discovery Learning Spaces” in the MERLOT Journal of Online Learning and Teaching (Vol. 4, No. 4). I am deeply grateful to the editors Drs. Edward H. Perry and Michelle Pilati and to the anonymous reviewers who vetted that work and made superb suggestions. That article is available at http://jolt.merlot.org/vol4no4/hai-jew_1208.htm. (“MERLOT” stands for Multimedia Educational Resource for Learning and Online Teaching).

A workplace that is supportive and conducive to learning and research is critical to academic achievements. While this work was created outside the auspices of my workplace, the learning opportunities of my line of work have encouraged my professional growth and pursuit of further learning. For those reasons, I am grateful to the affordances at Kansas State University.

Three highly talented and capable individuals served on the editorial board of this book: Dr. Barney Dalgarno of Charles Sturt University in Australia; Dr. Ramesh C. Sharma at the University of Guyana; and Brent A. Anders, of Kansas State University. All three brought unique insights and skills to the evolution of this text. I am grateful for their contributions.

Thanks to Mike Killian of IGI-Global for supporting the initial phases of manuscript development. Thanks to Chris Wozniak and Hannah Abelbeck for the sprint to the finish. I am also deeply appreciative of the professional people at IGI Global for their consistent and important support throughout this process.

This book, as always, is for R. Max.
