Acknowledgment

Many people had an indirect influence on bringing this book about. Specifically, there is my wife Linda, and my dogs who patiently lay around my desk while I write.

I started writing in early 2005 after completing Communication of Complex Information. I was expecting to complete it in 2, maybe 3 years. Obviously that schedule proved overly optimistic. I received a Professional Development Assignment (sabbatical) from the University of Memphis in Spring 2006 during which I read a substantial amount of the research incorporated into the book and wrote the first draft. Then I moved to East Carolina University where the department nicely kept me off committees and allowed me time to write.

For the final stages of writing, there are the anonymous reviewers. Their comments were instrumental shaping the book into its final form. A thanks to my development assistant at IGI Global, Michael Killian, for his fast responses to all my questions as I finished up the manuscript.

I also must acknowledge the local coffee shops, especially the Daily Grind, where I spent too many afternoons drinking too much coffee while writing a large portion of this book.

Finally, my thanks to everyone who takes an interest, either as a researcher or practitioner, in the communication of complex information and the need for quality human-information interaction. Technical communication needs to address these issues as it moves forward, and you are the people who will make it happen.

Michael J. Albers
