# Table of Contents

Preface .................................................................................................................................................. xv

**Chapter 1**  
Metaheuristic Search with Inequalities and Target Objectives for Mixed Binary Optimization Part I: Exploiting Proximity ............................................................... 1  

*Fred Glover, OptTek Systems, Inc., USA*  
*Said Hanafi, Universite de Valenciennes, France*

**Chapter 2**  
Metaheuristic Search with Inequalities and Target Objectives for Mixed Binary Optimization – Part II: Exploiting Reaction and Resistance ................................................................. 17  

*Fred Glover, OptTek Systems, Inc., USA*  
*Said Hanafi, University of Lille -Nord de France, UVHC, and LAMIH, France*

**Chapter 3**  
A Reinforcement Learning: Great-Deluge Hyper-Heuristic for Examination Timetabling .......... 34  

*Ender Özcan, University of Nottingham, UK*  
*Mustafa Mısır, Yeditepe University, Turkey*  
*Gabriela Ochoa, University of Nottingham, UK*  
*Edmund K. Burke, University of Nottingham, UK*

**Chapter 4**  
A Hybrid Genetic Algorithm for Optimization of Two-Dimensional Cutting-Stock Problem .......... 56  

*Ahmed Mellouli, University of Sfax, Tunisia*  
*Faouzi Masmoudi, University of Sfax, Tunisia*  
*Imed Kacem, University Paul Verlaine - Metz, LITA, France*  
*Mohamed Haddar, University of Sfax, Tunisia*

**Chapter 5**  
A Rigorous Analysis of the Harmony Search Algorithm: How the Research Community can be Misled by a “Novel” Methodology ................................................................. 72  

*Dennis Weyland, Istituto Dalle Molle di Studi sull’Intelligenza Artificiale (IDSIA), Switzerland*
Chapter 6
Research Commentary: Survival of the Fittest Algorithm or the Novelest Algorithm? The Existence Reason of the Harmony Search Algorithm ................................................................. 84

Zong Woo Geem, iGlobal University, USA

Chapter 7
DIMMA: A Design and Implementation Methodology for Metaheuristic Algorithms - A Perspective from Software Development .................................................................................. 90

Masoud Yaghini, Iran University of Science and Technology, Iran
Mohammad Rahim Akhavan Kazemzadeh, Iran University of Science and Technology, Iran

Chapter 8
Movement Strategies for Multi-Objective Particle Swarm Optimization ........................................ 109

S. Nguyen, Asian Institute of Technology, Thailand
V. Kachitvichyanukul, Asian Institute of Technology, Thailand

Chapter 9
A New Multiagent Algorithm for Dynamic Continuous Optimization ........................................... 131

Julien Lepagnot, Université de Paris 12, France
Amir Nakib, Université de Paris 12, France
Hamouche Oulhadj, Université de Paris 12, France
Patrick Siarry, Université de Paris 12, France

Chapter 10
Improving Switched Current Sigma Delta Modulators’ Performances via the Particle Swarm Optimization Technique ........................................................................................................ 154

M. Fakhfakh, University of Sfax, Tunisia
S. Masmoudi, University of Sfax, Tunisia
Y. Cooren, University of Paris, France
M. Loulou, University of Sfax, Tunisia
P. Siarry, University of Paris, France

Chapter 11
A Reinforced Tabu Search Approach for 2D Strip Packing ................................................................ 171

Giglia Gómez-Villouta, Université d’Angers, France
Jean-Philippe Hamiez, Université d’Angers, France
Jin-Kao Hao, Université d’Angers, France

Chapter 12
A Study of Tabu Search for Coloring Random 3-Colorable Graphs Around the Phase Transition .... 189

Jean-Philippe Hamiez, Université d’Angers/LERIA, France
Jin-Kao Hao, Université d’Angers, France
Fred W. Glover, OptTek Systems Inc., USA
Chapter 13
A Metaheuristic Approach to the Graceful Labeling Problem

Houra Mahmoudzadeh, Sharif University of Technology, Iran
Kourosh Eshghi, Sharif University of Technology, Iran

Chapter 14
A Survey on Evolutionary Instance Selection and Generation

Joaquin Derrac, University of Granada, Spain
Salvador García, University of Jaén, Spain
Francisco Herrera, University of Granada, Spain

Chapter 15
A Sociopsychological Perspective on Collective Intelligence in Metaheuristic Computing

Yingxu Wang, University of Calgary, Canada

Chapter 16
Theorems Supporting r-flip Search for Pseudo-Boolean Optimization

Bahram Alidaee, University of Mississippi, USA
Gary Kochenberger, University of Colorado Denver, USA
Haibo Wang, Texas A&M International University, USA

Chapter 17
Stochastic Learning for SAT-Encoded Graph Coloring Problems

Noureddine Bouhmala, Vestfold University College, Norway
Ole-Christoffer Granmo, University of Agder, Norway

Chapter 18
Page Number and Graph Treewidth

Li Xianglu, Zhongyuan University of Technology, China

Chapter 19
The Analysis of Zero Inventory Drift Variants Based on Simple and General Order-Up-To Policies

Jianing He, South China Normal University, China
Haibo Wang, Texas A&M International University, USA

Chapter 20
BDD-Based Synthesis of Reversible Logic

Robert Wille, University of Bremen, Germany
Rolf Drechsler, University of Bremen, Germany
