Acknowledgment

As with most of my writing projects, this one is the result of the contributions and inspirations from many different individuals.

I would like to thank the IGI Global staff who I had the pleasure to work with on this project. Emily Golesh and Erika Carter helped with formulating the book so that it would be appropriate for members of the professional IT community. Myla Harty provided timely guidance during the development of the manuscript. Jan Travers helped with some technical details relating to the book.

I would also like to thank the reviewers of the manuscript whose valuable suggestions helped to improve this work. I tried to incorporate as many of their suggestions as possible although not all suggestions were feasible.

I give a very special thanks to Nonglak Treethummakul for her unwavering support and for being there with me while I was working on this manuscript. Her encouragement kept me going forward with this project.

I would like to thank Mirna Morrison and Jonnie Chandler who worked with me at Armstrong Atlantic State University while I was writing the preliminary version of this work. They always made coming into work more fun. A warm thanks to my colleagues at Armstrong Atlantic who provided a supportive environment. Thanks also to my colleagues at the United States Naval Academy and in particular, to Provost Andy Phillips, for helping to create a supportive and flexible work environment.

I give many thanks to Tamara Burton for comments and work on an early draft of this book.

Thanks to the faculty members and the Department of Computer Science at Chiang Mai University who provided a supportive environment for me to work on this book, especially during the spring semester of 2011 and the five summers preceding that. I give warm thanks to Sanpawat Kantabutra for his friendship and support, and for always helping to make me feel at home in Thailand.

Thanks to Pattama “Tui” Longani and Wiriya Techaploog for helping me with editing the manuscript and for helping to convert my original LATEX files into WORD. Special thanks to Tui for her timeliness on this project and also for capturing many screenshots.
This book is partially derived from CSCI 6100, a graduate technical writing course that I introduced and first taught at Armstrong Atlantic State University during the fall of 2002. The following students served as note-takers in that course:

- Roger Beall: Conference paper submission and Cascading Style Sheets
- Andrew Eason: Refereeing and submitting a paper, grant proposals, and web presentations
- Jane Eason: Grammar, LATEX formatting tips, and personal communication
- Fitz Hiltzheimer: Manuscript preparation and Web presentations
- Ruslan Hristov: Introduction, presentations, and writing definitions
- Frank Malinowski: Biographical sketch, typesetting code, and overhead presentations
- Chris McCarthy: LATEX, oral presentations, and SLITEX
- William McVay: Writing conference papers, presentation abstracts, and SLITEX
- Ben Page: HyperText Markup Language and HTML tools
- Dan Riddell: Creating documents, writing techniques, and book publishing
- Janice Stanford: Résumé writing and writing for the web
- DeOnté Tift: Presentations, PowerPoint, and indexing
- Bart Westgeest: Writing conference papers and oral presentations
- Chris Williams: Documentation, email, and presentations
- Stefan Wirtz: LATEX, refereeing, and miscellaneous writing tips

Although not all of these topics made it into the final version of the book, these students deserve an acknowledgment and a great deal of thanks for their hard work.

In the spring of 2009 Ray taught another section of CSCI 6100. The following students did some work on individual chapters of the book, as part of their course. Their contributions are much appreciated, and I warmly thank them for their help.

- Jamie Blondin: Extensible Hypertext Markup Language
- James LaPlante: documenting an event
- Marcel Manning: LATEX
- Les Sears: résumés and CVs
- Russell Smith: email
- Ivan Sopin: writing a research paper
