Acknowledgment

This book is based on many efforts from students and colleagues in department of information science at university of Fukui, and I think this book could not be completed without their efforts.

First of all I express my gratitude to associate Professor Dr. Shuji Taniguchi and former Associate Professor Dr. Tatsuro Yanase for their supports in conducting research on anonymous systems. Regarding individual topics, materials about anonymous communication systems were enhanced through discussions with Mr. Kazuya Kouro, Dr. Hazim Anas Haddad, Mr. Hiroya Tsurugi, and Ms. Hazuki Okuno. Their developments of various prototype systems had enlarged the initial ideas about ESEBM, and also ideas about anonymous tags had emerged thorough discussions with them. Performance of ID list based anonymous authentication schemes had been improved by Mr. Keisuke Ikuta and Mr. Masatoshi Sasatani. Many defects and weaknesses of anonymous credit card systems (including anonymous record agreement protocol) and anonymous auction systems had been removed through discussions and prototype system developments with Mr. Yusuke Ohashi and Ms. Hazuki Okuno, and Mr. Kazem Hasan and Mr. Masatoshi Sasatani, respectively. Discussions with Mr. Kazuya Kouro, Mr. Masaki Yamaguchi, and Mr. Ryou Akioka had given me various ideas about anonymous object delivery and monitoring systems. About e-voting systems, discussions with Mr. Arturo Valencia Milian had inspired me to start the development, initial ideas had emerged from these discussions, and they had been realized through discussions and prototype system developments with Dr. Kazi Md. Rokibul Alam.

I express my gratitude also to IGI Global and anonymous reviewers of this book. IGI Global gave me an exciting opportunity, and suggestions of the reviewers substantially improved the book. Lastly, I’m grateful to my wife Yuri, and daughters Youko and Tomoko for their supports and encouragements.
