Acknowledgment

This is the work a lifelong learner. While I have never quite decided between the social and natural sciences, I have been fortunate to have had great mentors over the years. In particular, I would to acknowledge the late Dr. W. Michael Reed. I met Dr. Reed (the only professor whom graduate students did not call by his first name) during my doctorate in Educational Communication and Technology at New York University. He became my advisor, seamlessly guided me through my doctoral studies, and taught me statistics and proper educational research methodologies.

Dr. Janet Liou-Mark, my long-time mentor, has played a pivotal role in the development of this book, but first a bit of background on our relationship. I met Janet, a Mathematics Professor, as an undergraduate student at New York City College of Technology (City Tech). Although I did not have the opportunity to take a class with her, we did charter the National Society of Collegiate Scholars chapter of the college. About a decade ago, when I was a City Tech student, she asked me to draft the petition letter requesting this honor society chapter at City Tech. Subsequently, she wrote me a successful recommendation letter for graduate school, a Master’s of Science program at Polytechnic University, which is across the street from City Tech in Downtown Brooklyn, and we kept in touch. When it came time for me to pursue my doctorate, she wrote me another successful recommendation letter. A few months before I graduated, she invited me to talk at a Women in STEM luncheon that she organized at the college. After my talk, Pamela Brown, Dean of the School of Arts and Sciences, encouraged me to apply for a new Technical Writing tenure-track faculty position in the English Department. Janet guided me through the application process too, providing interview tips and speaking highly of me to her colleagues. Coming full circle, in my first semester as a faculty member at this college, she invited me to deliver the keynote address, “On the Need for Interdisciplinary Studies,” to the largest group of inductees at the convocation of the City Tech National Society of Collegiate Scholars chapter.

When I mentioned my idea for the book, Janet instantly encouraged me to write the proposal, and suggested the targeted focus on the urban classroom. Throughout
the development of the book, she offered me help on finding authors, suggested my foreword author, and provided general feedback. Always positive and productive, and keen on my professional development, Janet is a guiding light in my life.

Thanks also to my friends and colleagues who worked with me, such as Dr. Reginald A. Blake, who asked me to join the City Tech STEM Success Task Force, Black Male Initiative, and Project Kaleidoscope (PKAL) Facilitating Interdisciplinary Learning (FIDL) program. In addition, Dr. Candido Cabo, my former professor and current research partner, who continues to encourage me to ask questions and seek answers through our mixed-methodology research on underrepresented students in computer programming. I would also like to thank Dr. Cinda P. Scott, Project Coordinator, The City Tech I3 (Innovation through Institutional Integration) Incubator: Interdisciplinary Partnerships for Laboratory Integration, Provost Bonne August, Dean Sonja Jackson, and Julia Jordan, who cheered me on and have contributed to the success of this book.

I would like to thank the peer reviewers for their constructive feedback, as well as the members of my editorial advisory board, Julie Thompson Klein, Jeanne L. Narum, and Malu C. Schloss, for their guidance. I worked with Jeanne during the Keck-PKAL FIDL initiative, one of the leading advocates in the United States for what works in building and sustaining strong undergraduate programs in the fields of Science, Technology, Engineering, and Mathematics (STEM), and had the chance to discuss these efforts and my ideas for the then-new interdisciplinary course, “Weird Science: Interpreting and Redefining Humanity,” with her all over the country at Keck-PKAL-sponsored events. I am very grateful that she wrote the foreword for this book.

I would like to thank my parents, Agatha and David—my mom for always supporting me, and my dad for always expecting and encouraging me to accomplish more. I also wish to thank my sister, Verneta, for long talks about teaching. Many thanks to my loving partner for his ability to calmly keep me focused on completing this important task during the chaos of competing responsibilities, as well as traveling for business and leisure. Finally, I would also like to thank all the students throughout the years; they are the inspiration for and the proof of any ideas about what works in education.
