## Section 1

### Elements of Industrial Operational Management

#### Chapter 1

**Structural Organisation of Industrial Companies** .................................................................... 1

*I. C. Dima, University Valahia of Targoviste, Romania*

*Piotr Pachura, Technology University of Częstochowska, Poland*

The System-Industrial Company ......................................................................................................... 1

The Input-Output Feedback Relation in Industrial Companies .......................................................... 6

Typology of Companies ...................................................................................................................... 10

Production Process ............................................................................................................................ 14

Designing and Analysing the Production Process ............................................................................ 18

The Production and Design Structure ............................................................................................... 22

Designing the Arrangement and Modernisation of the Production Departments .................................. 27

#### Chapter 2

**Capacity of Production** .............................................................................................................. 40

*I. C. Dima, University Valahia of Targoviste, Romania*

*Sebastian Kot, Technology University of Częstochowska, Poland*

Defining the Production Capacity ...................................................................................................... 40

Production Capacity of Basic Departments ....................................................................................... 42

The Production Capacity of the Auxiliary and Serving Departments ............................................... 49

The Production Capacity of the Surfaces of Productive and Non-Productive Departments .............. 54

Production Capacity Reserves .......................................................................................................... 55

Using the Operative Management in Balancing the Production Capacity .......................................... 59

Determining the Size of Industrial Companies ............................................................................... 61
Chapter 3
The Constructive and Technological Preparation of Production

I. C. Dima, University Valahia of Targoviste, Romania
Janusz Grabara, Technology University of Częstochowska, Poland

The Codification and Classification of Products
The Constructive Preparation of Production
The Integration of Production
Concentration of Production
The Organization and Modernization of Production
Production Scheduling
The Technological Preparation of Production Manufacture
The Use of Proper Technologies in the Manufacture of Industrial Products
The Simulation of Industrial Production Systems
The Cost of Quality Product During its Life Cycle
Measuring the Production Non-Quality by Comparison

Chapter 4
The Management of Basic Production Functions

I. C. Dima, University Valahia of Targoviste, Romania
Vladimir Modrák, Technical University of Kosice, Slovakia

Typology of Industrial Production
Fundamentals of Basic Production Management
The Management of In-Flow Production
Production Management by Orders
The Cost of Industrial Production
The Use of Computer Science in Industrial Production Management

Chapter 5
Auxiliary Production Management

I. C. Dima, University Valahia of Targoviste, Romania

The Contents of Auxiliary Production
The Management of the Maintenance, Repair, Restructuring and Modernisation of Fixed Assets
The Management of the Production and Use of Tools, Devices and Checkers
The Management of the Energy Sector

Chapter 6
Management of Serving Activity

I. C. Dima, University Valahia of Targoviste, Romania
D. M. Nowicka-Skowron, Technology University of Częstochowska, Poland

Storage Management
Management of Internal Transportation Activity
Chapter 7
Operative Management of Industrial Production ............................. 221

I. C. Dima, University Valahia of Targoviste, Romania
S. Paunovic, Belgrade Banking Academy, Serbia

Theoretical Considerations Regarding the Concept of Operative Management of the Industrial Production ................................................................. 221
Programming the Industrial Production ........................................... 225
Releasing, Monitoring, Controlling, and Updating the Production Schedules .............................................. 226
Using the Dispatcher in the Operative Management of Industrial Production ........................................... 231
Computerising the Operative Management ........................................... 235
Efficiency of the Industrial Production Operational Management ........................................... 238
Use of the Balanced Dashboard in the Operative Management ........................................... 239

Chapter 8
The Use of Budgets in Forecasting the Activity of the Firm ......................... 243

I. C. Dima, University Valahia of Targoviste, Romania
Mariana Man, University of Petrosani, Romania

The Fundaments of Budgeting .......................................................... 244
Budgeting the Activity of the Firm ....................................................... 253
The Use of Budgets in the Management of the Firm ........................................... 269

Chapter 9
Elements of Logistics Used in Industrial Operational Management .................... 277

I. C. Dima, University Valahia of Targoviste, Romania
I. Grabara, Technology University of Częstochowska, Poland

Systemic Concept of Company’s Logistics ............................................. 277
Positioning Logistics into the Structural Organisation of the Company ................. 282
Activity of Logistics within the Company and the Costs it Occurs ......................... 287
Implementing the Logistic Study into The Company and the Costs it Occurs ................. 295
Company’s Non-Logistics: A “Logidram” for the Company ................................. 298
The Informatization of the Logistics Activity in a Firm ........................................... 302

Section 2
Industrial Production Programming Systems

Chapter 10
Scheduling the Production Obtained by Means of Production Processes Organised in Variable Flow ......................................................... 313

I. C. Dima, University Valahia of Targoviste, Romania

Theoretical Considerations .............................................................. 314
Elaborating the Production Schedule for the Variable Flow Production Lines .................. 315
Scheduling the Production Obtained by Production Processes where One Operation is Performed for Similar Products with Dimensional or of Different Quality Ranges ........................................... 318
Chapter 11
Scheduling the Production Obtained by Production Processes where Several Operations Are
Performed and Repeated at Time Intervals Previously Set Forth for Various Products ..........325

I. C. Dima, University Valahia of Targoviste, Romania
Determining the Size of the Series .................................................................326
Determining the Size of the Batch...............................................................328
Determining the Duration of the Manufacturing Cycle.............................331
Establishing the Calendar Accelerations ....................................................336
Calculating the Stocks of Half-Finished Products .....................................337
Correlating the Scheduled Production with the Production Capacity ..............340

Chapter 12
Managerial Systems, Methods, and Techniques Used in Scheduling Industrial Production ........345

I. C. Dima, University Valahia of Targoviste, Romania
Mariana Man, University of Petrosani, Romania
Cost Objective Management System ..........................................................346
Managerial Cost Management System .......................................................351
Target Cost Management System ..............................................................356
Expert Systems Used in Industrial Production Management ............................359

Section 3
Industrial Production Multiserve

Chapter 13
Considerations on Multi-Service on Workstations ........................................371

I. C. Dima, University Valahia of Targoviste, Romania
Features Of the Processing Cycle on Tools ................................................371
Grouping Processing Operations According to Their Technological Structure ......374
The Parameters Used for Characterising the Multi-Serving of Several Tools, Depending on
the Structure and Duration of Technological Operations ............................375
The Technique of Combining Operations to be Performed on Several Tools for Various Types of
Technological Processes .............................................................................378
Determining the Optimal Production Conditions for the Operation of Several Tools Using The
Theory of “Waiting Rows” .............................................................................379
Applying the “Markov Chain” Theory in the Case of Operating Several Tools ........380
Using the Models “Takacs” and “Runnenburg” for the Optimisation of the Multi-Service of
Tools ...........................................................................................................387
The Method of Optimisation of the Service of Several Tools Using the “Mechanisation
Coefficient” .................................................................................................389
Chapter 14
Operational Production Structures Used in the Multi-Serving System ........................................ 398

I. C. Dima, University Valahia of Targoviste, Romania
Jozef Novac-Marcincin, Technical University of Kosice, Slovakia

Organising the Production by Departments (Workshops) .............................................................. 399
Organising the Production by Lines Of Flow Manufacturing Lines .............................................. 399
Organising the Production by Production Departments equipped with Numerical Control (CN, CNC) and Automatic Machine Tools ............................................................... 401
Organising the Production by Production Departments which Consist of Transfer Machines and Processing Centres ................................................................. 402
Organising the Production by Flexible Manufacturing Systems ................................................. 406
Organising the Production by Production Departments Equipped with Industrial Robots ....... 410

Chapter 15
Using the Graphical-Analytical Principle to Use Multi-Serving in Operational Management .......... 423

I. C. Dima, University Valahia of Targoviste, Romania

Factors That Influence The Serving Of Several Workstations And Their Interdependence ...... 424
Multi-Serving under the Conditions of Performing Some Identical Operations with the Same Duration and Structure ................................................................................. 427
Multi-Serving Under the Conditions of Performing Some Different Operations with the Same Cycle Duration .......................................................................................... 429
Multi-Serving under the Conditions where the Machine Tools Perform Multiple Operations, Some Having the Same Duration and the Same Cycle ...................................... 430
Multi-Serving under the Conditions where the Machine Tools Perform Different Operations ................................................................................................................. 432
Multi-Serving under the Conditions of Serving Several Machine Tools more than Once in the Same Cycle .............................................................................................. 434
The System of Indicators Used in Analysing the Degree of Multi-Serving More than One Workstation ........................................................................................................ 438

Chapter 16
Using the Multi-Serving System in Textile Industry ................................................................. 444

I. C. Dima, University Valahia of Targoviste, Romania

Features of the Multi-Serving System used in Textile Industry .................................................... 444
Serving Several Knitting Machines .............................................................................................. 445
Features of Serving Several Weaving Machines ........................................................................... 447
Organising the Serving of Several Machines at Random Time Intervals .................................... 449
Chapter 17
Control of Industrial Production Management ................................................................. 460

I. C. Dima, University Valahia of Targoviste, Romania
Dejan Eric, Institute of Economic Sciences, Serbia
Process of Control and its Content ................................................................................. 460
Forms of Managerial Activity Control ......................................................................... 464
Systems Used in Managerial Activity Control .............................................................. 468
Involvement of Control in Management ....................................................................... 476
The Interdependence Relation between Managerial Activity Coordination and Control .................................................................................. 480

Compilation of References ............................................................................................ 483

About the Contributors .................................................................................................. 486

Index ............................................................................................................................... 491
