Acknowledgment

We would like to thank our respective institutions that valued this editorial endeavor, Florida Gulf Coast University (Lakshmi Gogate) and Purdue University (George Hollich). Lakshmi would like especially to thank her Dean, Dr. Donna Price Henry, College of Arts and Sciences, for her generous support, in particular a course release for editing this volume and for chapter writing. We have benefited enormously from the encouragement we have received from colleagues, both within and outside our respective institutions, who inspired us through the various stages of this process and readily lent us their experience. In addition, we would like to thank several of our esteemed colleagues in the field who graciously participated in this endeavor as members of the Editorial Advisory Board and encouraged us along the way. A portion of this material is based upon work supported by the March of Dimes Birth Defects Foundation (12-FY08-155) and the National Science Foundation (Grant No. 1123890) to Lakshmi Gogate. Any opinions, findings, and conclusions or recommendations expressed in this material are those of the author and do not necessarily reflect the views of the March of Dimes or the National Science Foundation.
