Acknowledgment

I would like to acknowledge everyone who assisted in the project. I could not have done this without you.

First of all, I would like to thank the authors for submitting their contributions and their assistance during the process. Some of the authors also served as referees for the chapters. As editor, I would like to thank the reviewers for insightful and critical reviews of all chapters. These reviews have been invaluable for the authors in preparation of the final versions of chapters. Reviewing chapters is the key to ensuring quality and fairness. Here, it was done as part of a sense of collegiality and duty.

An editorial process which takes such a long period of time needs support from the side of the publisher. I would like to thank the team at IGI Global, in particular to Christine Smith, Jan Travers, and Erica Gallagher for their tolerance and patience, and for their invaluable support, without which the book would have remained just a good idea.

I believe that the publication of this volume does not mean the end of the work on information technology prosumption. Many ideas were proposed for further publications, many issues need to be further explored, and many concepts presented here encourage the further research works. I hope this publication is a way of launching a continuing discussion in a wider field.
