Editing a book is a hard but compensating and enriching task, as it involves a set of different activities, like contact with authors and reviewers, discussion and exchange of ideas and experiences, process management, organization and integration of contents, and many more, with the permanent objective of creating a book that meets the public’s expectations. This task cannot be accomplished without the help and support of many sources. As editors, we would like to acknowledge the help, support, and belief of all who made this creation possible.

First of all, this book would not have been possible without the ongoing professional support of the team of professionals at IGI-Global. We are grateful to Dr. Mehdi Khosrow-Pour, Jan Travers, Kristin Klinger, and Erika Carter for the opportunity and belief in this project. A very special mention of gratitude is due to Joel Gamon, Development Editor, for his professional support and friendly words of advice, encouragement, and prompt guidance. We also address our recognition and appreciation to all the staff at IGI Global, whose contributions throughout the process of production and making this book available all over the world was invaluable.

We are grateful to all the authors for their insights and excellent contributions to this book. We are also grateful to the authors who simultaneously served as referees for chapters written by other authors, as well as to the external referees and to the members of the editorial advisory board for their insights, valuable contributions, prompt collaboration, and constructive comments. Thank you all, authors and reviewers, you made this book! The communication and exchange of views within this truly global group of recognized individuals from the scientific domain and from industry was an enriching and exciting experience!

Thank you.
