Acknowledgment

The book would not have been possible without the support of many people and organizations: first, the editors would like to express their appreciation to the advisory board; second, we are very grateful to the contributors; and third, the reviewers for their tremendous time, effort, and service to critically review the various chapters. The help of top leaders of public and private organizations, who inspired, encouraged, and supported the development of this book project. Those leaders include the President of American University of Beirut, Professor Peter Dorman, who asked a question on how to reduce poverty around the world. This question has inspired Professor Osman to explore the shared-value concept, and cognitive analytics through technology and benchmarking best-practices using Frontier Data Envelopment Analysis to boost productivity growth, develop innovative social business models, and generate sustainable shared value to stakeholders; the senior IBM leadership team (at the EMEA-IBM Academic Impact Days, Milano, May 5-6, 2014) who invited Professor Osman to be among the academic senior leaders from around the world to discuss emerging ideas and to share knowledge on new development in cognitive systems for smarter business computing and organizations. This high-level academic meeting inspired us to extend the concept of “cognitive systems” to the development of the “cognitive analytics management” from framework, leadership, talent, and education skills to models. In particular, specific appreciations go to Mr. Mike Rhodin, Senior Vice President IBM-Watson; Mr. Harry van Dorenmalen, Chairman of IBM Europe; Dr. Matthias Kaiserswerth, Vice President IBM Research Europe; Dr. Katharine Frase, Vice President IBM Public Sector; Dr. Marisa S. Viveros, Vice President Cybersecurity Innovation; Mr. James Spohrer, Vice President of Global University Programs; and Mr. Andrea Emiliani, Director of IBM Middle East.

We would like to express our appreciation to Prime Minister H.E. Mr. Najib Mikati who exposed Professor Osman to the experience of the Public Sector in Lebanon as a National Advisory Board member to Public Rail and National Transport directorate, where he has developed special research interests in Public Transport System, Personnel Talent Management, and Electronic Government Services. Recently, we would like to acknowledge the financial support to complete the book from the H.E. Husni al-Sawwaf Endowed Chair in Business and Management. Last but not least, the book benefited from a personnel support provided by a Qatar National Research Fund grant (NPRP09-1023-5-158: IMEET, An Integrated-Model for Evaluating E-Government Services Transformation), a member of Qatar Foundation. The statements made herein are solely the responsibility of the authors.

Special appreciations also go to Dean Robert G. Dyson and Dean Merza Hasan for their kind acceptance to evaluate the contributions in the book in order to write their foreword and afterword at very short notice. In addition, the editors would like to thank the book development team at IGI Global, namely
Ms. Lindsay Johnston, Managing Director, Mr. Austin M. DeMarco, Managing Editor, and Ms. Erin O’Dea, Development Editor. This professional and scientific book of excellent quality would not have been possible without their excellent patience, continuous support, and above all, their understanding of the main reason of the delays in time to efficiently produce an impactful book with updated knowledge on the new concept of shared values. Finally, special acknowledgment goes to special colleagues, namely, Salim Chahine, Wilfred van Honacker, and Yusuf Sidani, for lengthy discussions to develop a simple and easy to understand cognitive framework; the discussions with our school’s visitors: the president of Coca-Cola International, Dr. Ahmet Bozer, on good leadership and value creation, Director of Deloitte Leadership Institute, Professor Craig L. Pearce, for discussions on the main difference between cognitive leadership and shared leadership, and finally, for the discussions at IBM days with Professor Jose Hernadz Orallo on multi-disciplinary needed skills for economic growth and Professor Lea A. Deleris on big data challenges and potentials for public and private sectors. Appreciation goes to my research assistant, Ms. Farah Suleiman, for working on the project over many weekends to get the book project to production after a long waiting time. In addition, special appreciations go to the office of associate dean administrative assistants, namely Ms. Nada Khaliday-Kouzi, Ms. Carla El Hage, Ms. Nadine Abi Ghannam, for their various help during the write-up of the first section of the book. Finally, we also hope that the readers will share our excitement and learn from our well-research shared-value knowledge to help them set their future directions using cognitive analytical insights to brighten their darkness from our own perspectives.
