Acknowledgment

Piglet noticed that even though he had a Very Small Heart, it could hold a rather large amount of Gratitude. -A.A. Milne, Winnie-the-Pooh

Thank you to Diane Walton Editorial Consulting for her copyediting. Diane you were so enthusiastic throughout the project, and without you, this volume may never have reached completion. It was on more than one occasion that authors mentioned your conscientiousness.

Thank you to Jordan Brown who transcribed Gary Retherford’s interview and who also transcribed his own video documentary interview with Katina Michael. Jordan, for one so young, you have an exceptional sense of direction when it comes to the social implications of technology. To Sarah Kepa, formerly of Indiana University, thank you for the transcription and translation of the interview with Serafin Vilaplana. Thank you to The Transcription People for the remaining transcriptions, and to Jessica Brown for addressing some last minute requirements.

To the awesome foursome who graduated during the completion of this book—Sarah Jean Fusco, Dr. Anas Aloudat, Dr. Roba Abbas, and Dr. Jennifer Heath—we love you dearly. You have been on this journey with us and you have each inspired.

A very special thank you to our PhD student, Alexander Hayes, who has supported us at every event we have hosted in the last 3 years – and whose own PhD on wearable technologies will indeed be groundbreaking.

To the University of Wollongong’s Faculty of Informatics Soaring Eagle program administered by Professor Philip Ogunbona and Lyn Bosanquet in 2012, thank you! To our Dean of Engineering and Information Sciences, Professor Chris Cook, we so appreciate that you’ve never shied away from social policy discussions on technical matters.

To our communications team at UOW led by Bernie Goldie for all the exposure our work has received. We extend acknowledgment to the Australian Science Media Centre (AusSMC), to the science and technology editors at The Conversation, ABC Science Online, and The Drum, and investigative reporters at the Australian Broadcasting Corporation. To Michael Organ, UOW’s archivist, for always keeping up-to-date with our research output. Thanks also to Vicky Wallace for her diligence in reporting on UOW research and for facilitating Katina’s socio-ethics presentation at TEDxUWollongong’s 2012 on the theme of “Medical Bionics.”
To our amazingly gifted colleagues at IEEE SSIT amongst an extended list Professors Keith Miller, Luis Kun, Joe Herkert, Ken Foster, Michael Loui, Clinton Andrews, Karl Stephan, Jeff Robbins, and Ms Janet Rochester. We are especially indebted to Terri Bookman, Managing Editor of T&S, who has been a rich reservoir of knowledge and a true support throughout Katina’s editorship. Our IEEE SSIT extended family continues to be a unique communal voice with a socially responsible backbone untethered by the demands to innovate aimlessly.

To the team at the Macquarie Dictionary who entered uberveillance into the official Australian dictionary in 2009, after the term was nominated for “word of the year” and went on to win the technology category in 2008. To the folks at the Australian Law Dictionary for their inclusion of the term uberveillance in the Oxford University Press volume, and to Australia’s Les Murray, arguably one of the world’s greatest living poets, for his essay titled: “Infinite Anthology: Adventures in Lexiconia” in The Monthly, citing uberveillance in 2010. Also to novelist Sam Yarney for his noteworthy use of the word, along with its broader implications in his international suspense thriller The Banjo Player (2010). All these are landmark inclusions in the growing body of supplementary literature surrounding the study of embedded surveillance devices.

A big thank you to Professor Kevin Haggerty for agreeing to contribute the foreword to the book long before it was completed – this was a special show of trust and it meant more to us than you might imagine.

To our long list of international expert Editorial Advisory Board members, you never tired of our questions and correspondence. You have not only been there for us through the development of this edited book, but right through to the international conferences and workshops and special issues we have hosted and edited in the past. The quality of this book is also a reflection of your diligence and your own expert research into emerging technologies. Thank you for your tireless reviews and for always being willing to give of your time in a voluntary capacity.

To our individual author contributors, some of whom we never knew before this project began. A massive thank you for your immense patience and for dedicating time from your busy lives to go through two sets of revisions – one to address reviewer comments, and then to address currency in terms of changes to your manuscripts reflecting real-world incremental innovations that had taken place since 2010. So much has happened over the last three years, thank you for sticking by us throughout! You have discerned what uberveillance is all about, tested its implications further in your own research, and have challenged us to additional explorations. And many thanks, of course, to each one of our interviewees. Your time, effort, and trust in our motivation was greatly appreciated and, you enriched this book.

To the publishers at IGI and our editorial directors, Joel Gamon and Christine Smith. Thanks for hanging in there when it seemed we just kept pushing all the deadlines!

To Professors Roger Clarke and Marcus Wigan, a special thank you for being there from the beginning. You have been great teachers and inspirational colleagues.

To Matthew Fedele-Sirotnich, who asked me that question during the lecture that got me to searching for the “right” word: “So, then, where is all of this [surveillance] heading?” You were a fantastic student and we are incredibly proud of your progress in industry.

To our three little children who have been ever so patient with our busy writing schedules, we say thank you forever and ever. You are a big part of the reason we believe our research into the social implications of microchipping humans is so enormously important.

To our parents, we thank you greatly for the blessings and prayers. Without your support and succor, little of this research would have been possible.
This book is dedicated to you, dad. Thank you so much for everything. May you rest in peace (George Michael, 1924-2013) http://veillance.me/blog/2013/3/10/memories.
