Acknowledgment

Our vision for this book was to provide a means for researchers, designers, and practitioners to share experiences, new trends, and future challenges about Business Process Archeology. This will also showcase the heterogeneous technology solutions implemented in different parts of the world in the realm of Business Process Archeology.

During the course of realizing this vision, we received much support from people who spent a huge amount of effort on the creation and review process of the book. We would like to express our gratitude to all the projects and people involved in researching Business Process Archeology techniques. We are especially grateful to the authors who provided us with deep insights into their projects and related results. This book would not exist without the hard and committed work of the chapter authors. We want to thank them for their contribution to build this book as a community of researchers in a new and interesting field. In addition, thanks go to all who provided constructive and comprehensive reviews.

A part of this book project, all the Business Process Archeology efforts developed would not have been possible without the support of several companies like Exenio, Oficina de Cooperación Universitaria, Alarcos Quality Center, SER&Practices, Sicaman, among others; as well as without the support and the close collaboration of University of Bari, University of Innsbruck, and University of A Coruña. Additionally, this work was partially supported by the FPU Spanish Program and the R&D projects PEGASO/MAGO (Ministerio de Ciencia e Innovación MICINN and Fondo Europeo de Desarrollo Regional FEDER, TIN2009-13718-C02-01); and GEODAS-BC (Ministerio de Economía y Competitividad y Fondo Europeo de Desarrollo Regional FEDER, TIN2012-37493-C03-01).

Finally, we want to thank the team at IGI Global for their continuous support throughout the publication process. Deep appreciation and gratitude is due to Austin DeMarco, editorial assistant at IGI Global, who supported us and always ensured that the project was kept on schedule. He never complained even when we missed a deadline or answered late.
