Optimal Information Modeling Techniques

Table of Contents

Foreword ................................................................. vii
Kees van Slooten
University of Twente, The Netherlands

Preface .............................................................................. xii

Chapter 1. Evaluating an ISD Methodology for Software Packages .................................................. 1
Kees van Slooten and Marcel Bruins
University of Twente, The Netherlands

Chapter 2. Modelling Molecular Biological Information: Ontologies and Ontological Design Patterns ........................................... 16
Jacqueline Renée Reich, University of Manchester, UK

Chapter 3. Concept Acquisition Modeling for E-commerce Ontology .......................................................... 30
Maria Lee, Shih Chien University, Taiwan
Kwang Mong Sim, Chinese University of Hong Kong, China
Paul Kwok, The Open University of Hong Kong, Hong Kong

Chapter 4. An Object-Oriented Approach to Conceptual Hypermedia Modeling ................................................. 41
Wilfried Lemahieu, Katholieke Universiteit Leuven, Belgium

Chapter 5. Conceptual Modeling of Large Web Sites ................................................................. 55
Bernhard Strauch and Robert Winter
University of St. Gallen, Switzerland

Chapter 6. A Method to Ease Schema Evolution ................................. 69
Lex Wedemeijer, ABP, The Netherlands
Chapter 7. A Three Layered Approach for General Image Retrieval ....................................................................................................... 78
   Richard Chbeir, Youssef Amghar and Andre Flory
   LISI - INSA, France

Chapter 8. Is There A Life After Objects? ............................................. 84
   Jean Bézivin, University of Nantes, France

Chapter 9. A Systemic Approach to Define Agents ............................... 95
   Andy Y. Cheung and Stephen L. Chan
   Hong Kong Baptist University, Hong Kong

Chapter 10. Modeling of Coordinated Planning and Allocation of
   Resources ................................................................................................... 108
   Alexey Bulatov, University of Houston-Victoria, USA
   Atakan Kurt, Fatih University, Turkey

Chapter 11. Tacit Knowledge Acquisition and Processing Within
   the Computing Domain: An Exploratory Study .................................... 121
   Peter Anthony Busch, Macquarie University, Australia
   C. N. G. ‘Kit’ Dampney, University of Newcastle, Australia

Chapter 12. Modelling Business Rules Using
   Defeasible Logic ........................................................................................ 128
   G. Antoniou, University of Bremen, Germany
   M. Arief, Griffith University, Australia

Chapter 13. EE-Cat: Extended Electronic Catalog for Dynamic
   and Flexible Electronic Commerce ........................................................ 137
   Jihye Jung, Dongkyu Kim, Sang-goo Lee, Chisu Wu,
   and Kapsoo Kim, Seoul National University, Korea

Chapter 14. Enforcing Modeling Guidelines in an ORDBMS-
   based UML-Repository ............................................................................ 150
   N. Ritter and H.-P. Steiert, University of Kaiserslautern, Germany

Chapter 15. Simulation for Business Engineering of Electronic
   Markets ....................................................................................................... 163
   Marijn Janssen and Henk G. Sol
   Delft University of Technology, The Netherlands

Chapter 16. Representing and Reasoning with Scenarios within
   Information Systems Modeling ............................................................... 170
   Choong-ho Yi, Karlstad University, Sweden
Chapter 17. From Object-Oriented Modeling to Agent-Oriented Modeling: An Electronic Commerce Application ..............................176
Sooyong Park, Sogang University, Korea
Vijayan Sugumaran, Oakland University, USA

Chapter 18. Web-Based Cooperative Information Systems
Modeling .....................................................................................................193
Youcef Baghdadi, United Arab Emirates University

Chapter 19. EMC – A Modeling Method for Developing Web-based Applications ...............................................................207
Peter Rittgen, University Koblenz-Landau, Germany

Chapter 20. A UML Representation of U.S. Mutual Fund Servicing as an Iconic Model for Servicing the New EU Equivalent – UCITS .................................................................221
Patrick Leamy, Offshore Fund Consultant, Boston, USA
George Ballester, Mellon Trust, Boston, USA
Thomas Wright, Data Modeling Consultant, Cape Maine, USA

C. Calero, Universidad de Castilla-La Mancha, Spain
E. Marcos, Universidad Rey Juan Carlos, Spain
M. Piattini, Universidad de Castilla-La Mancha, Spain

Chapter 22. Informationbase – A New Information System Layer 239
Dragan Kovach, SUPER-KING, Inc., Croatia
Kresimir Fertalj, University of Zagreb, Croatia

Chapter 23. A Comparison of Stochastic Models for the Interarrival Times of Packets in a Computer Network .......................248
Dennis Guster, St. Cloud State University, USA
Semyon Litvinov, Penn State - Hazelton, USA
Mary Richardson, Grand Valley State University, USA
David Robinson, St. Cloud State University, USA

Chapter 24. A Methodology for Adaptive Workflows .........................258
Liu Shuzhou and Angela Goh Eck Soong
Nanyang Technological University, Singapore

About the Editor ........................................................................................272

Index ...........................................................................................................273
