Acknowledgment

This book has benefited greatly from the assistance of many people. First, I would like to express my sincere appreciation to Dr. Harlan Krumholz (Yale University) for the help, understanding, interest, advice, and support that he has given me during the 15 years that I have been working with him. Without him, this project would not have been possible. I am extremely grateful to Dr. Sharon-Lise Normand (Harvard University), who has provided invaluable help, advice, and guidance in both advanced statistical theory and applied statistics for many years. I would like to thank my colleagues and friends, including Drs. Martha Radford (New York University), JoAnne Foody (Harvard University), Jonathan Fine (Norwalk Health), Jennifer Mattera, Judy Lichtman (Yale University), and Thomas Meehan (Qualidigm) for many useful and insightful discussions. Although many of these discussions were restricted to the classification and profiling tasks in the healthcare area, they provided the roots for me to expand basic principles into the network security area. Special appreciation goes to Jane Yoon (Harvard University), who provided many helpful suggestions and a thorough, line-by-line critique of the manuscript. I would also like to acknowledge Emi Watanabe (Yale University) for her great work in producing many of the figures in this book. Assistance was also provided by Tierney Giannotti and Lynda Grayson (both at Qualidigm), and Mian Wang (Massachusetts Institute of Technology). I am grateful to Dr. Inyoung Kim (Virginia Tech) for an early discussion of the content of this book, Nate Melby (Trane Inc.), my editor at IGI Global, and the anonymous reviewers for their reading and detailed comments, which have substantially improved the presentation of the research provided in this book. Finally, I am deeply appreciative to Marcia Petrillo, CEO of Qualidigm, who provided me the opportunity to work with her 15 years ago after I had graduated. Without her influences, I would not have been able to conduct this project.

I have worked on this book for many nights and weekends over the past years. I would like to thank my family members for their understanding, assistance and patience, and thank Lhong Daj for her encouragements. It was their support, love, and help that allowed me to complete this project. I have tried to eliminate any and all foreseeable errors in this book, but I am sure that there may still be some errors, ambiguities or oversights that have not been revised, for which I take full responsibility. I would greatly appreciate any feedback and suggestions. They can be emailed to me at yun.wang.yw38@yale.edu.
