Acknowledgment

I would like to personally acknowledge and thank all of the contributing authors for their hard work and the quality of research that went into every chapter of this text. Without the contribution of such thought leaders, research into this field would not be as advanced as it has become.

Similarly, I would like to acknowledge and thank all of the countless individuals that have contributed to the success of this book, including those who have offered suggestions and guidance and of course those that have acted as reviewers.

Finally I would like to thank all those at IGI Global for making the process of getting this book from concept to the book that you are reading such an intellectually rewarding process.
