Acknowledgment

This book could not have been compiled and edited without the gracious guidance and assistance of various individuals. First and foremost, I want to thank all of the bright and creative authors who contributed their great contemporary work in the area of innovative technologies to benefit individuals with autism. I look forward to working with each of them in the future. Secondly, I’d like to offer my gratitude to the peer reviewers who painstakingly took their time to review the content, syntax and empirical rigor of each chapter.

Next, I am grateful to Kayla Wolfe and Allyson Gard at IGI Global Publishing, who made this editing process a pleasure. I ensured that their inboxes were always jam-packed with my emails! I would also like to thank Marymount Manhattan College for their unflagging support and encouragement. I am especially appreciative of Senada Aručević, Rebecca Ruchlin, and Vanessa Norkus, my three research assistants at Marymount Manhattan College, who contributed greatly to the early preparations of this text.

I would like to acknowledge my wonderful husband, Dr. Ariel Brandwein, and my two little men, Judah Lior and Jonah Gabriel Brandwein, who afforded me the time and opportunity to complete a project that was so important to me. Ariel’s technical expertise, his fathering skills, and most importantly his patience were huge assets in completing this project. I thank my father, Rabbi Paul Silton, and my wonderful siblings, Elana, Michal, Akiva, Tamar, Aviva, and my twin sister Shira, for their constant encouragement and support. Finally, there are no words to describe the level of time, effort, patience, and commitment my mother, Faye Silton, took to help ensure the timely completion of this text. Her creative ideas coupled with her tremendous writing and editing skills were invaluable to me, and the text is all the more dear to me since she was such an integral part of its creation.

I want to offer a final note of thanks to all parents, teachers, special educators, technology specialists, siblings, and family members of children on the autism spectrum. Each of you work tirelessly each day to brighten and expand the world of opportunities for our very special children. My hope is that this text will help you expand their worlds further. My final debt of gratitude goes to children with autism themselves, who have afforded us the challenge and opportunity to broaden our scope of how to further engage their unique and beautiful minds.

Nava R. Silton
