Acknowledgment

This book is based on our lifelong experience of developing gaseous detectors. During all these years, we have had the opportunity to meet and work with a large number of very skilled and fascinating people, with a common interest in gaseous detectors of all kinds.

We hope that this book reflects the hard work and interesting discoveries made by all these persons. We are grateful for all the knowledge they have shared with us and the memorable moments we have had together.

We would like to take the chance to specially thank some of those who opened our eyes to this fascinating field of research, and who have supported and encouraged us through the years: Amos Breskin, Per Carlson, Paolo Fonte, Robert Golden, Paolo Martinengo, Enrico Eugenio Nappi, Anton Oed, Panagiotis Pavlopulos, Fabio Sauli, Steve Stochaj, and many others.

Special thanks also for many discussions and technical support to Eraldo Oliveri, Leszek Ropelewski, Maxim Titov, and all members of the RD51 collaboration.

None of the work would have been possible without the professional hands of Jacob van Beelen, Roger Bouclier, Eric David, Daniel Lacroix, Rui de Oliveira, Juha Rantanen, Miranda van Stenis, and many more of the skilled engineers.

Finally, we are especially grateful to Martin Suffert and Georges Charpak, who introduced and trained us to the world of gases and electric fields.
