Acknowledgment

I would like to thank IGP for granting me the opportunity to publish this book and share my knowledge with academicians, educationist, and individuals who wish to broaden their horizons about educational technologies pertaining to engineering education. Availability of the vast and untapped potentials of the latest technologies inspired me to integrate their benefits in educational software tools. In addition I would like to express my special gratitude to:

• Assoc. Prof. Ir. Dr. Ramesh Singh (Mechanical Engineering Department, UNITEN), for his constructive comments at all stages of the research presented in this book and especially during the development of the (TAPS) packages, advice on the course on performing research.
• Prof. Dr. Richard M. Felder and Barbara A. Solomon for the use of the Index of Learning Styles Questionnaire.
• My wife Dr. Kirandeep Kaur Sidhu for proof reading the book. This publication would not have been possible without her.
• Many thanks to the team at IGI Global, in particularly Joel Gamon, who have answered my queries, provided advice, and support.
• I also like to thank all the referees who provided constructive and comprehensive reviews of the contents of this book. They work anonymously in the background, but their tireless effort is much appreciated.
