About the Contributors

Raja Ramanathan is a Technology Advisor, Senior IT Architect, and SOA SME with over 25 years of experience in the computing industry, providing technology consulting services to Fortune 500 enterprises in the USA. Raja specializes in business and technical architecture, developing architecture vision, enterprise integration solution architecture, middleware configuration, software design and development, strategic planning, and governance consulting for mission critical projects. His technical expertise is in Java, SOA, BPM, and tools and technologies primarily from IBM and Oracle. Raja’s enterprise clients span business domains in oil and gas exploration and pipelines; energy generation, retail, and wholesale; energy distribution and trading; engineering services, financial services, and software product development. Raja is an author and editor of the reference book Service-Driven Approaches to Architecture and Enterprise Integration that was published by IGI Global in 2013. His research interests are in the areas of service-driven computing, cloud computing, enterprise integration, and autonomic computing. Raja has a MEE in Electrical Engineering from the University of Delaware, USA.

Kirtana Raja is a Market Development Advisor at IBM, USA, supporting the Business Analytics and Content Management software divisions. Previously, Kirtana was a Solutions Architect for IBM, creating novel predictive analytics and Big Data use cases for clients in the media and entertainment industry. Kirtana has an SB in Chemical Engineering from the Massachusetts Institute of Technology, USA; SB in Management Science from MIT Sloan; and an MBA from Cornell University, USA. She was writer and news editor for MIT’s newspaper The Tech. Kirtana co-edited the reference book titled Service-Driven Approaches to Architecture and Enterprise Integration that was published by IGI Global in 2013. Kirtana has recently filed three patents in the areas of interactive advertising and media content systems.

Mohammed Akour is currently an Assistant Professor of Computer Science at Yarmouk University, Jordan. Mohammed received his PhD in Software Engineering from North Dakota State University, USA, focusing on the synchronization of runtime models to support testing autonomic software. He also holds Master’s and Bachelor degrees in Computer Information Systems from Yarmouk University. His research interests are in the areas of software testing, autonomic computing, and model-driven engineering. Mohammed is a member of the ACM and IEEE Computer Society.
Abdulhameed Alelaiwi is a Vice Dean for technical affairs, Scientific Research Deanship, King Saud University (KSU), Kingdom of Saudi Arabia, and a faculty member in the Software Engineering Department, College of Computer and Information Sciences, KSU. He holds a PhD in the field of Software Engineering from the Department of Software Engineering, Florida Tech University, USA, 2002. Before joining King Saud University, he worked in the industry for seven years. He continues to consult with local corporations in the areas of software engineering, e-government, and information security.

Tamer Al-Mashat is currently a PhD student at the Institute of Statistical Studies and Research, Cairo University, Egypt. He received his Master’s degree in Computer Science from Cairo University in 2012. Tamer’s current research interests include service-oriented computing, BPM, Semantic Web, and Cloud computing.

George Athanasopoulos is a Post-doc Research Associate at the Department of Informatics and Telecommunications of the National and Kapodistrian University of Athens, Greece, and member of the S3 Lab. His research interests include Service-Oriented Computing with a focus on context-adaptable composition of heterogeneous services comprising Web services, P2P services, and OGC services. In addition, he has research interests in automated planning, Cloud computing, distributed systems, system interoperability, and software architecture modeling, as well as modern programming methodologies.

Balbir S. Barn is a Professor of Software Engineering at Middlesex University, UK. Balbir has over 15 years of commercial research experience working in research labs at Texas Instruments and Sterling Software, where he was involved in the research and design of leading software products such as IEF™. Balbir’s research is focused on model driven software engineering where the goal is to use models as abstractions and execution environments to support enterprise architecture and application integration using complex events. He has led numerous externally funded projects that apply model-driven principles to business processes, learning theories, and more recently, the theory building aspects to model driven engineering.

Salma Bradai is a PhD student at the National School of Engineering of Sfax, Tunisia, and a researcher in distributed applications at the ReDCAD Laboratory at the University of Sfax. Salma obtained her Engineering degree in Computer Science from National School of Engineering of Sfax (ENIS) in 2011 and MS degree in Computer Science in 2012 from ENIS. Currently, her research interests are concentrated in service discovery in mobile and heterogeneous environments.

Tony Clark is a Professor of Informatics and Head of Department for Computer Science at Middlesex University, London. He has made contributions to various modeling standards including UML 2.0 via the Object Management Group and worked on modeling projects with a range of companies including IBM, TCS, Compuware, British Telecom, and British Aerospace Systems. In 2004, Tony co-founded Xactium, a modeling technology company where he was responsible for technical and commercial development of an advanced core technology XMF-Mosaic. He is a guest editor for special issues of a modeling journal, an associate editor of the SoSyM Journal, has co-chaired MODELS 2011, and was a program board member of MODELS 2012. He is the lead author of a widely cited book about modeling language foundations titled Applied Metamodeling: A Foundation for Language Driven Development.
About the Contributors

Peter J. Clarke is currently an Associate Professor in the School of Computing and Information Sciences at Florida International University, USA. Peter received his PhD in Computer Science from Clemson University in 2003, MS degree from SUNY Binghamton University in 1996, and BSc degree in Computer Science and Mathematics from the University of the West Indies Cave Hill in 1987. His research interests are in the areas of software testing, software metrics, model-based testing, model-driven software development, and domain-specific modeling languages. Peter is a member of the ACM (SIGSOFT, SIGCSE, and SIGAPP), IEEE Computer Society, and the Association for Software Testing.

Gabriele Costa is a researcher in the Dipartimento di Informatica, Bioingegneria, Robotica e Ingegneria dei Sistemi (DIBRIS), at the University of Genova, Italy. He received his PhD degree in Computer Science from the University of Pisa in 2011. Gabriele’s current research interests are in language-based security and history-based security applied to service-oriented computing and mobile applications security. Other research interests include formal verification of software and runtime security monitoring.

Francesco Luca De Angelis is a PhD student at the Institute of Information Service Science (ISS), Geneva School of Economics and Management at the University of Geneva, Switzerland. He earned his Master’s Degree in Computer Engineering at the University of Roma “Tor Vergata” with a thesis on the optimization of the General Number Field Sieve factorization algorithm. His current research interests include distributed algorithms for self-* applications and computational collective intelligence.

José C. Delgado is an Associate Professor at the Computer Science and Engineering Department of the Instituto Superior Técnico (Lisbon University), in Lisbon, Portugal, where he earned the PhD degree in 1988. He lectures courses in the areas of Computer Architecture, Information Technology, and Service Engineering. José has performed several management roles in his faculty, namely as Director of the Taguspark campus near Lisbon and as Coordinator of the BSc and MSc in Computer Science and Engineering of that campus. He has been the coordinator and researcher in several research projects, both national and European. As an author, José’s publications include a book, several book chapters and more than 40 papers in internationally refereed conferences and journals.

Giovanna Di Marzo Serugendo is the Director of the Institute of Information Service Science (ISS) at the University of Geneva, Switzerland, since 2011. She has extensive experience in the field of self-organizing and self-adapting systems. Giovanna received her PhD in Software Engineering from the Swiss Federal Institute of Technology in Lausanne (EPFL) in 1999. Her research interests are related to the engineering of decentralized software with self-organizing and emergent behavior. She is exploring the use of appropriate architectures for developing trustworthy, dependable, and controllable self-organizing and self-managing systems, including systems involving large-scale information dissemination and flows. She is part of the editorial board of several international journals in the areas of grid and intelligent systems. Giovanna co-founded the IEEE International Conference on Self-Adaptive and Self-Organizing Systems (SASO) and the ACM Transactions on Autonomous Adaptive Systems (TAAS), for which she served as Editor-in-Chief from 2005 to 2011.
Schahram Dustdar is a Full Professor of Computer Science with a focus on Internet technologies. Schahram heads the Distributed Systems Group at Vienna University of Technology, Austria, and is also Honorary Professor of Information Systems at the Department of Computing Science at the University of Groningen, The Netherlands. He is Chair of the IFIP Working Group 6.4 on Internet Applications Engineering and a founding member of the Scientific Academy of Service Technology.

Fatma El-Licy is an Assistant Professor (since 2001) in the Department of Computer and Information Sciences at ISSR, Cairo University, Egypt. Fatma received her PhD degree in Systems Engineering from Oakland University, MI, USA, in 2001; Diploma and an MSc degree in Computer Sciences from the Institute of Statistical Studies and Research (ISSR), Cairo University; and BSc from the Faculty of Science majoring in Mathematics from Al-Azhar University. Her PhD research included the formal verification of Digital ICs. Fatma’s current research interests include software engineering, software development, software testing, formal verification, and e-learning.

Dieter Fensel is a Professor at the University of Innsbruck, Austria, and the director of STI Innsbruck, a research institute with approximately 30 employees. Dieter has over 250 publications in the form of scientific books and journals, conferences, and workshop contributions. He has co-organized over 200 conferences and workshops and supervised over 40 Masters and PhD theses. Dieter is a recipient of the Carl-Adam-Petri-Award of the Faculty of Economic Sciences from the University of Karlsruhe. His current research interests focus on the development and application of semantics to all areas of computer science. Dieter Fensel is the Founding President of the Semantic Technology Institute (STI) International, whose major aim is to establish semantics as a core pillar of modern computer science. He has served as the Scientific Director and Coordinator of more than 70 ICT and IST funded projects.

Jose Luis Fernandez-Marquez is currently working as full time Researcher at the Institute of Information Service Science at the University of Geneva, Switzerland, with a research contract funded by SAPERE EU project. In 2011, he defended his PhD thesis titled “Bio-Inspired Mechanisms for Self-Organizing Systems.” His expertise is mainly focused on highly distributed, self-organizing, and multi-agent systems. Jose has wide experience in implementing large-scale simulations and engineering self-organizing systems. His research interests are focused on swarm intelligence, high performance computing, and pervasive computing. Jose has participated in the organization of many conferences and workshops, such as the Symposium on Applied computing (SAC2012, SAC2013), Self-Adaptive and Self-Organizing systems (SASO2012), and Adaptive Service Ecosystems: Nature and Socially Inspired Solutions (ASENSIS2012). He is also involved as a reviewer for high impact international journals and conferences.

Frank Fowley is a Researcher at IC4, the Irish Centre for Cloud Computing and Commerce. Frank is a graduate in engineering from Trinity College, Dublin, and holds a postgraduate Honours Diploma in Business Development from DIT and a Master’s Degree from DCU in Security and Computer Forensics. He is a recognized Microsoft Business Solutions Specialist. Frank currently specializes in Cloud broker migration and interoperability issues. Prior to his involvement with IC4, he spent almost 20 years in management positions in the software and telecommunications industries and has been involved in a number of startups.
Kristof Friess is a Freelancer working on Web and mobile platforms. He is the lead developer of Pepperbill, a mobile cashier solution based on iOS devices with a heavy use of Cloud computing. Very early on, Kristof started developing Apps for iOS and the necessary backends.

Annaji S. Ganti is currently a Software Engineer at Microsoft Corporation, USA, and is pursuing a PhD in Computer Science from North Dakota State University (NDSU), USA. He received a Master’s degree in Computer Science from NDSU in 2009, and a Bachelor degree in Computer Science from Jawaharlal Nehru Technological University, India. Annaji has over four years of experience in the software industry as a software tester. His research interests include software testing, Cloud computing, virtualization, and Web services. Annaji is a member of the ACM and IEEE Computer Society.

José María García is a Senior Researcher at the Semantic Technology Institute (STI) Innsbruck, University of Innsbruck, Austria. His research focus is on Semantic Web technologies, Service-Oriented Architectures, and Linked Data. José received a PhD in Computer Science from the University of Seville, Spain, with a thesis on improving Semantic Web Services discovery and ranking using a lightweight and integrated approach. He also has a MSc in Computer Science and Software Engineering from the University of Seville. José has participated in several national and European research projects (e.g., MSEE, SOA4All, SUPPORT, S-Cube, PRELIDA, BYTE) including public-private partnerships. He has published more than 20 articles as conference papers, workshop papers, technical reports, and journal articles. José has also co-organized national conferences and has been a member of several conference and workshop program committees and an external reviewer for international journals.

Mariana Goranova is a Professor of Computer Science at the Technical University of Sofia (TUS), Bulgaria, and head of the Department of Programming and Computer Technologies at TUS. Mariana holds a PhD from the Faculty of Electronics and Computer Science, TUS; MSc from the Faculty of Applied Mathematics and Informatics, TUS; and BSc from the Faculty of Electronics and Computer Science, TUS. Mariana lectures both postgraduate and undergraduate subjects, covering the areas of programming with C, C++, Java, and C#. Her current research interests focus on advanced programming language concepts, generic programming, .NET technologies, and Service-Oriented Architecture. She is a member of IEEE Computer Society.

Sang Woo Han is as a Senior Researcher (since 2012) at the Agency for Defense Development (ADD), Daejeon, Korea. He received MS and PhD degrees in Information and Communications from Gwangju Institute of Science and Technology (GIST), Gwangju, Korea, in 2005 and 2011, respectively; and a BS degree in Computer Science from Chung-Ang University, Seoul, Korea, in 2003. During 2011-2012, he was a postdoctoral researcher at the School of Information and Communications at GIST. His research interests include advanced collaboration environments with a current focus on service-oriented computing, multimedia systems/services for Future Internet, and software frameworks on scientific and combat simulation.

Volker Herwig is a tenured Professor at the University for Applied Sciences in Erfurt, Germany (since 2008). Prior to this assignment, Volker was an IT consultant and Senior IT Strategist for Siemens, working in Germany and the USA. His current interests are mobile device platforms and Cloud computing.
About the Contributors

Marty Humphrey is an Associate Professor in the Computer Science department at the University of Virginia, USA. Marty received his PhD degree in Computer Science from the University of Massachusetts in 1996. His research interests include Cloud computing, eScience, Grid computing, real-time systems, etc. Marty has been active in Cloud, Grid, and eScience research for over 10 years, through projects supported by the Department of Energy, the National Science Foundation, and Microsoft Research. He has led the first eScience application development on the Windows Azure platform (MODISAzure) and now continues to solve large-scale scientific problems using the Cloud platforms.

Hiranya Jayathilaka is a Computer Science PhD candidate at the University of California, Santa Barbara (UCSB), USA. His research interests include Web services, governance of Web APIs, and the application of Web services to Cloud computing. Previously, at WSO2, a company specializing in open source middleware for SOA, Web services, and Cloud, he led the development of the WSO2 Enterprise Service Bus and WSO2 API Manager. Hiranya is a committer of the Apache Xerces2/J project and is the project management committee chair for the Apache Synapse project. He has also contributed to Apache Web services, Apache Axis2, and Apache Derby projects, among others.

Mohamed Jmaiel is a Full Professor of Computer Science (since 2009) at the National School of Engineers of Sfax, Tunisia. He joined National School of Engineers of Sfax as assistant professor of Computer Science in 1995. Mohamed obtained his Diploma of Engineer in Computer Science from Kiel University, Germany, in 1992, and PhD from the Technical University of Berlin in 1996. He participated in the initiation of many graduate courses at the University of Sfax, Tunisia. Mohamed’s current research interests include software engineering of distributed systems, formal methods in model-driven architecture, component-oriented development, self-adaptive and pervasive systems, and autonomic middleware. He has published over 130 regular and invited papers in international conferences and journals and has co-edited 9 conference proceedings and 10 journal special issues on these subjects.

Sofien Khemakhem is an Associate Professor at the National School of Computer Sciences, Tunisia (ENIS). Sofien received his PhD from University of Paul Sabatier, France, and University of Sfax Tunisia, in 2011; MS degree in Computer Science from National School of Engineers of Sfax (ENIS) in 2001; and Engineering degree in Computer Science from National School of Computer Sciences, Tunisia (ENSI), in 1998. His research interests are in the discovery and composition of software components. Sofien is member of the program committees of the Integrated Intelligent Computing Conference.

JongWon Kim is a Full Professor at the Gwangju Institute of Science and Technology (GIST), Gwangju, Korea. He joined GIST in 2001, and since April 2008, he is leading GIST SCENT (Super Computing cENTer) as a Director. He is also leading the Networked Computing Systems Lab (recently renamed the Networked Media Lab) which focuses on dynamic and resource-aware composition of media-centric services employing programmable/virtualized computing/networking resources. From 1994-2001, he was a faculty member of KongJu National University, KongJu, Korea, and University of Southern California, Los Angeles, USA. His recent research interests cover SDN, Cloud computing for...
About the Contributors

Future Internet testbed, and smart media-centric services employing heterogeneous SmartX nodes. He has co-authored more than 300 technical publications in international and domestic journals and conferences. He has also served as editorial board member, workshop and TPC co-chair, and TPC member. He has been involved with several working group activities related to global R&E networks and the Future Internet.

**Tariq M. King** is currently a Software Test Architect at Ultimate Software, and an Adjunct Professor in the School of Computing and Information Sciences at Florida International University (FIU), USA. Tariq received his PhD in Computer Science from (FIU) in 2009, where he specialized in software testing of autonomic and adaptive systems. He also holds a Master’s in Computer Science from FIU and Bachelor in Computer Science from the Florida Institute of Technology. His research interests are in the areas of software testing, autonomic and Cloud computing, model-driven software development, and computer science education. Tariq is a member of the ACM and IEEE Computer Society.

**Natallia Kokash** is a Researcher at Leiden Institute of Advanced Computer Science (Leiden University) and Centrum Wiskunde and Informatica (CWI), The Netherlands. Natallia received her PhD in Information Technology and Communication from University of Trento, Italy, in 2008; and MSc degree in Applied Mathematics and Computer Science from Belarussian State University in 2004. She has worked on several large-scale EU research projects (EU FP6 PLASTIC, EU FP7 COMPAS, IMI-JU DDMoRe) and has several years of industrial experience in the development of banking and financial IT systems. Natallia’s current research interests include programming and modeling languages, service-oriented computing, and formal methods in software engineering.

**Pigi Kouki** is currently a graduate student and a Researcher at the Department of Technology and Information Management at the University of California, Santa Cruz, USA. Pigi received her BSc and MSc from the Department of Informatics and Telecommunications of the National and Kapodistrian University of Athens, Greece. She was a researcher at the same department with interests in Web applications, context-aware computing, and their applicability in the business process domain.

**Chandra Krintz** is a Professor of Computer Science at the University of California, Santa Barbara (UCSB), USA. She has MS and PhD degrees in Computer Science from the University of California, San Diego, USA. Chandra has led a number of research projects that have advanced the state-of-the-art in programming systems in ways that improve performance and energy consumption, and expedite and simplify distributed application deployment. Chandra has advised over 60 undergraduate and graduate students, has been involved in efforts to broaden participation in computing, and is the progenitor of the AppScale Cloud platform. Chandra’s efforts have been recognized with a NSF CAREER award, the CRA-W Anita Borg Early Career Award (BECA), and the UCSB Academic Senate Distinguished Teaching Award.

**Vinay Kulkarni** is a Chief Scientist at Tata Consultancy Services, India. His research interests include model-driven software engineering, self-adaptive systems, and enterprise modeling. Vinay’s work in model-driven software engineering has led to a toolset that has been used to deliver several large business-critical systems over the past 15 years. Much of this work has found its way into OMG...
standards, three of which Vinay contributed to in a leadership role. Vinay has several patents to his credit and has authored many papers in scholastic journals and conferences worldwide. A Visiting Professor at Middlesex University, London, Vinay serves on several program committees of international conferences. He is also Co-PC Chair of India Software Engineering Conference (ISEC) 2014 being held in Chennai.

**Iker Larizgoitia** is a PhD student at the Semantic Technology Institute (STI) Innsbruck, University of Innsbruck, Austria, and a research and development engineer at EVRYTHNG, UK. His research focus is on Services, Service-Oriented Architectures, and Semantics. Iker received a Master’s degree in Mathematics, Statistics, and Computation in 2010 from Universidad del Pais Vasco. He also has a Diploma of Advances Studies in Information Systems in 2007 and a Bachelor degree in Computer Science in 2004 from Universidad de Deusto, Spain. Iker was involved in several national and European research projects (e.g., MSEE, ENVISION, and LarKC).

**Philipp Leitner** is currently a Senior Research Associate at University of Zurich in Switzerland. Philipp holds PhD, MSc, and BSc degrees in Business Informatics from Vienna University of Technology, Austria. His research is focused on software engineering for Service- and Cloud-based systems. He is particularly interested in middleware and technical tools that support developers in building better distributed systems.

**Ignacio Llorente** is the Director of the OpenNebula Project, a co-founder of C12G Labs, and a Full Professor at UCM, Spain. Ignacio received a PhD in Computer Architecture from UCM and an executive MBA from the Instituto de Empresa. His research interests include high performance computing, virtualization, Cloud computing, and Grid technology. He is a member of IEEE.

**Roberto Mandati** is a Research Assistant at the Institute of Informatics and Telematics of CNR, Pisa, Italy. He received his Laurea degree in Mathematics from Roma Tre University in 2010 and his Laurea Magistrale degree in Mathematics Summa Cum Laude from Roma Tre University in 2012.

**Ming Mao** received his PhD degree from the Computer Science Department, University of Virginia, USA, in 2012. His Doctoral research was focused on Automatic Resource Management in the Cloud. Ming has published several highly cited papers in the top conferences and is a leading researcher in the Cloud resource management field. He has served on several conference program committees and is an editor of the *Journal of Cloud Computing Research* (JCCR).

**Fabio Martinelli** is a Senior Researcher of Instituto di Informatica e Telematica Consiglio Nazionale delle Ricerche in Pisa, Italy. Fabio received his PhD in Computer Science from the University of Siena in 1999. He is a co-author of more than 150 scientific papers, and his research interests range from formal methods to distributed systems, computer security, and foundations of security and trust. He founded and chaired the working group on Security and Trust Management (STM) at the European Research Consortium in Informatics and Mathematics (ERCIM), and is involved in several steering committees of international working groups and conferences. Fabio is also involved (as coordinator) in a number of European and Italian projects on information and communication security.
Ilaria Matteucci is a Researcher at IIT-CNR with a MSc (2003) and PhD (2008). Her main research interest is formal models for security that focus on the problem of synthesizing secure systems. Currently, Ilaria’s research interests include the study of process algebra based techniques for the analysis and run-time enforcement of security and privacy properties. Ilaria participates in National and European projects in the area of information security applied to Web services, healthcare, and critical infrastructure.

Moeiz Miraoui is an Assistant Professor of Computer Science at High Institute of Applied Science and Technology, University of Gafsa, Tunisia, since 2009. Moeiz received his PhD (2009) in Computer Science from the Ecole de Technologie Supérieure (ETS), University of Quebec, Canada; MSc (2003) in Computer Science from the National Engineering School of Sfax, University of Sfax, Tunisia; and BSc/Ing in Computer Science from the National School for Computer Science, University of Tunis, Tunisia, in 1999. He is member of the LATIS laboratory at the University of Quebec and has supervised several MSc students and PhD projects. His research interests include pervasive and ubiquitous computing, context-aware systems, and smart spaces. Moeiz has published papers in national as well as international conferences and journals and is a reviewer and committee member of several journals and conferences.

Rafael Moreno-Vozmediano is an Associate Professor in the Department of Computer Architecture and Systems Engineering at Complutense University of Madrid (UCM), Spain. His research interests include high performance distributed computing, virtualization, and Cloud computing. Rafael has a PhD in Computer Architecture from UCM.

Steffen Musiol is a Masters student in Computer Science at the University of Ulm, Germany, since 2012. He has a Bachelor degree in Computer Science. Steffen worked as student research assistant in various institutes at the University of Ulm. He also did an internship as software developer at SAP research in Brisbane, Australia. Steffen’s research interests include business process management and mobile and pervasive computing. He is currently working on his Master’s thesis addressing the integration of mobile tasks into existing process execution engines in a service-driven and robust manner.

Omondi John Opala is an Associate Professor in the Department of Information Technology at Devry University’s Keller Graduate School, and Technical Lead at Cisco Systems, North Carolina, USA. Omondi’s research interests include systems architecture, Cloud computing, information assurance, security governance, Big Data, and Software-Defined Networks (SDN).

Claus Pahl is a Senior Lecturer and is the leader of the Software and Systems Engineering Research group at Dublin City University, Ireland, which focuses on software architecture, model-driven development, and service engineering. Claus is a graduate from the University of Technology in Braunschweig and holds a PhD from the University of Dortmund. He is the Deputy Director of the CloudCORE Research Centre and the Architecture Team Lead in the Irish Centre for Cloud Computing and Commerce (IC4). Claus is also a co-principal investigator at the Centre for Next Generation Location. Claus has published more than 240 papers. He is a reviewer for journals and member of more than 100 program committees for various conference workshops. He has organized major international conferences and is on the editorial board of five journals.
Chung-Yeung Pang received his PhD degree from Cambridge University, England. He has over 25 years of experience in software development in various areas, ranging from device drivers to large enterprise IT systems. Chung-Yeung has experience in many programming languages including assembler, C, COBOL, Java, Ada, Lisp, and Prolog. For the past 20 years, he has been working as a consultant in various enterprise software projects. Chung-Yeung has been engaged in architecture, design, development, coaching, and managing IT projects. At one time, he was a lead architect in a project with a budget of over US$1 Billion. He has led many projects to completion within time and budget despite limited resources and high-pressure situations.

Michael Pantazoglou is a Post-doc Research Associate at the Department of Informatics and Telecommunications of the National and Kapodistrian University of Athens, Greece. He is currently a member of the S3Lab group. Michael’s current research interests span service-oriented computing, with a focus on service discovery and composition, P2P computing, Semantic Web technologies, and Cloud computing.

Maurice Peat is a Senior Lecturer in the Business School at the University of Sydney, Australia. His current research interests cover such topics as credit risk and corporate distress analysis, managerial decision context for financial analysis, the economics of restructuring transactions, and the impacts of information technology on financial innovation. Maurice has broad experience in business-related disciplines, having a PhD in Finance from the University of Technology, Sydney.

Rüdiger Pryss is a PhD student at the University of Ulm, Germany. Rüdiger obtained a Diploma in Computer Science and then worked as a consultant and developer in a software company. Since 2008, he has been a research assistant at the University of Ulm. In his doctoral thesis, Rüdiger focuses on the impact of mobility on process-aware information systems and investigates how mobile devices may be robustly integrated with process execution technology. He is also interested in autonomous execution of process fragments on mobile devices. Rüdiger participates in various seminars and projects and lectures as an instructor.

Fethi Rabhi is a Professor at the School of Computer Science and Engineering at the University of New South Wales, Australia. His research interests are in software engineering, design methods, service-oriented computing, high-performance computing, Web technologies, and applications in business, finance, and economics (e-business, financial trading, electronic markets, and banking). During his career, Fethi has been leading several research projects in the UK and Australia with funding from both industry and research councils. Fethi has also been involved in the development of several commercial software products in the area of financial data analysis. He now leads the New Financial Services Project, which is part of the Smart Services Cooperative Research Centre in Australia.

Shawon (Syed) Rahman is an Associate Professor in the Department of Computer Science and Engineering at the University of Hawaii-Hilo, Hawaii, USA, and a visiting professor at the King Saud University, Riyadh, KSA. Shawon’s research interests include Software Engineering education, Software Testing and QA, Information Assurance and Security, and Web Accessibility. He has published more than 95 peer-reviewed articles and is a member of many professional organizations including IEEE, ACM, ASEE, ASQ, ISACA, and UPE.
Manfred Reichert is a Full Professor (since 2008) at the University of Ulm, Germany, where he is also the Director of the Institute of Databases and Information Systems. Manfred holds a PhD in Computer Science and a Diploma in Mathematics. His prior assignment was as an associate professor at the University of Twente, The Netherlands. There, he was also a member of the management board of the Centre for Telematics and Information Technology, which is one of the largest academic ICT research institutes in Europe. Manfred’s research interests include business process management including adaptive and flexible processes, process lifecycle management, data-driven, and object-centric processes, and service-oriented computing including service interoperability, mobile services, and service evolution. Manfred has been PC Co-chair of the BPM’08, CoopIS’11, EMISA’13, and EDOC’13 conferences, and General Chair of the BPM’09 and EDOC’14 conferences.

Marek Rychly is an Assistant Professor in the Department of Information Systems at Brno University of Technology (BUT), Czech Republic. Marek received his PhD in Computer Science and Engineering in 2010 from the Department of Information Systems at BUT; and a BS degree and an MS degree Cum Laude in Informatics in 2003 and 2005, respectively, from the Masaryk University, Faculty of Informatics. He also has an academic degree Rerum Naturalium Doctor in Software Systems in 2011 from the Charles University, Faculty of Mathematics and Physics. His general research interests are in the area of software architecture. Marek’s work focuses on dynamic reconfiguration and component mobility in component-based and service-oriented architectures, formal description of software architectures and their evolution, functional and quality-driven automatic Web service composition and testing, and distributed software systems. He has authored over 15 scholarly journal articles and conference papers on varied topics related to software engineering and software architectures.

Akram Salah is a Professor in the faculty of Computer and Information Sciences at Cairo University, Egypt. Akram graduated in mechanical engineering and worked in computer software for seven years before he got his PhD in 1986 from the University of Alabama at Birmingham, USA, in Computer and Information Sciences. He taught in the American University in Cairo, Michigan State University, and Cairo University, before joining North Dakota State University, where he designed and started a graduate program that offered PhD and MSc in Software Engineering. Akram’s research interest is in data and knowledge engineering, semantics, and the Semantic Web. He has published over 100 research papers.

Areeg Samir is a research student studying for a Master’s degree in Computer Science and Information Systems, Cairo University, Egypt. She holds a Diploma and Pre-Master’s in Information Systems and a Bachelor degree in Management Information Systems. Being one of the top students in the Bachelor degree, Areeg was appointed as an Assistant Professor just after graduation. She is specializing in the design and development of Web and Multimedia applications. Currently, Areeg’s area of focus is Cloud, and service-oriented and distributed computing technologies that enable the Cloud. Areeg publishes a regular blog and manages knowledge sharing groups on the Internet.

Ritu Sharma is a Visiting Faculty at the department of Computer Science, Himachal Pradesh University, India, and also at the University Institute of Information Technology (UIIT) and University College of Business Studies (UCBS), both affiliated to Himachal Pradesh University, Shimla, India. Ritu obtained her PhD in Computer Science from Himachal Pradesh University; Master’s of Computer Ap-
applications from Indira Gandhi National Open University (IGNOU), New Delhi; and BSc (Hons) degree from University of Delhi, New Delhi, India. She has published several research papers in peer-reviewed international journals and conferences. Ritu’s areas of interest are Cloud computing, Service-Oriented Architecture, Web services, Web technologies, software engineering, Model-Driven Architecture, and database management systems.

**Mike Sobolewski** is a world-class scientist at AFRL/WPAFB, USA; Professor of Computer Science at Polish Japanese Institute of Information Technology (PIJIT), Poland; and Chief Science Officer at SORCERsoft.com. Mike received his PhD from the Polish Academy of Sciences and DSc from the Polish Japanese Institute of Information Technology, Poland. His prior experience includes being a Professor of Computer Science at Texas Tech University and Director of SORCER Lab from 2002 until 2009. From 1994-2002, he was Senior Scientist and Chief Architect of large-scale projects at the GE Global Research Center. Mike was also a visiting professor of Computer Science at West Virginia University (1989-1994) and has served as visiting professor and consultant in the USA, China, Russia, and most of the European countries. At the Polish Academy of Sciences, he was the Head of the Pattern Recognition and Image Processing Department and the Expert Systems Laboratory, and was engaged in research in the areas of knowledge representation, knowledge-based systems, pattern recognition, image processing, neural networks, object-oriented programming, and graphical interfaces.

**Manu Sood** is a Professor in the Department of Computer Science at Himachal Pradesh University, Shimla, India. Manu has a PhD in Computer Engineering under the Faculty of Technology from University of Delhi, India; MTech in Information Systems with a Gold Medal from Netaji Subhash Institute of Technology, India; and BE degree in Electronics and Telecommunications from Government Engineering College, Jabalpur, India. He has over 25 years of extensive experience in the IT industry and academia in India. He has been Technical Program Committee member for a number of international conferences and has published many research papers in peer reviewed international journals and conferences and as book chapters. Manu is actively involved in a number of research projects sponsored by various government agencies. His research interests include software engineering, model-driven software development, Model-Driven Architecture, aspect-oriented software development, Service-Oriented Architecture, MANETs, and VANETs.

**Yoshinobu Tamura** is an Associate Professor at the Graduate School of Science and Engineering, Yamaguchi University, Japan. Yoshinobu has received several awards including Best Paper Award from the IEEE International Conference on Industrial Engineering and Engineering Management in 2012; Research Leadership Award in the area of Reliability from ICRITO in 2010; IEEE Reliability Society Japan Chapter Awards in 2007; and Presentation Award from the Seventh International Conference on Industrial Management in 2004.

**Ioan Toma** is a Senior Researcher at the Semantic Technology Institute (STI) Innsbruck, University of Innsbruck, Austria. His current research focus areas include Semantics, Linked Data, Services, and Social Media. Ioan received a PhD in Computer Science from the University of Innsbruck with a thesis on modeling and ranking Semantic Web services based on non-functional properties. He also has a Diploma of Engineering and a Master’s in Computer Science from the Technical University of Cluj-
About the Contributors

Napoca, Romania. Ioan has been involved in a number of research projects at national and European levels (e.g., ASG, DIP, eFreight, ENVISION, Grisino, LarKC, LDBC, MSEE, OntoHealth, RENDER, ServiceWeb3.0, SEALS, SESA, and SOA4All). He has published around 70 articles as book chapters, conference papers, workshops papers, and journal articles. Ioan has also co-organized multiple workshops and has been a member of many conference and workshop program committees.

Aphrodite Tsalgatidou is an Associate Professor at the Department of Informatics and Telecommunications of the National and Kapodistrian University of Athens, Greece. She is also the director of the S3Lab group, which undertakes research in the areas of service-oriented technology, and in particular, on service interoperability, P2P computing with a focus on trust and reputation management, and business process management with focus on process modeling, process mining, and adaptive process execution.

Jose Luis Vazquez-Poletti is an Assistant Professor in Computer Architecture at Universidad Complutense de Madrid (UCM), Spain, where he received a PhD in Computer Architecture, and is a Cloud computing researcher at the Distributed Systems Architecture Research Group. Jose has been directly involved in EU-funded projects, such as EGEE (Grid computing) and 4CaaSt (PaaS cloud), as well as many Spanish national initiatives. From 2005 to 2009, Jose’s research focused on application porting onto Grid computing infrastructures. Since 2010, his research interests include different aspects of Cloud computing with real life applications in mind, especially those pertaining to the high-performance computing domain.

Rich Wolski is a Professor of Computer Science at the University of California, Santa Barbara (UCSB), USA, and is the co-founder of Eucalyptus Systems Inc. Having received his MS and PhD degrees from the University of California at Davis (while a research scientist at Lawrence Livermore National Laboratory), he has also held positions at the University of California at San Diego, the University of Tennessee, the San Diego Supercomputer Center, and Lawrence Berkeley National Laboratory. Rich has led several national scale research efforts in the area of distributed systems and is the progenitor of the Eucalyptus open source Cloud project.

Shigeru Yamada is a Professor in the Department of Social Management Engineering, Graduate School of Engineering, Tottori University, Japan. He has published over 500 reviewed technical papers in the areas of software reliability engineering, project management, and quality control. Shigeru has received several awards including the Best Paper Award from the IEEE Reliability Society Japan Chapter in 2012; Exceptional International Leadership and Contribution Award in Software Reliability at ICRITO’2010 and 2011; International Leadership and Pioneering Research Award in Software Reliability Engineering from SREQOM/ICQRIT in 2009; numerous outstanding paper awards from IEEE and Reliability Engineering associations; and the Best Author Award from the Information Processing Society of Japan in 1992.
Lawrence Yao is a Research Assistant at the School of Computer Science and Engineering at the University of New South Wales, Australia. Lawrence has over nine years of industry experience working on various software development projects and a PhD in Computer Science from the University of New South Wales. His research interests include software design, Service-Oriented Architectures, scientific software architectures, analysis processes, scientific workflow systems, and financial data analysis.

Artsiom Yautshiukin is a Researcher of the Information Security Group at the Institute of Informatics and Telematics (IIT) of the National Concile of Research (CNR), Pisa, Italy. Artsiom received his PhD degree in Information and Communication Technology at the University of Trento in 2009. His main research interests include but are not limited to assessment of security using security metrics and risk, security assessment of complex business systems, and risk-based usage control. Artsiom also participated in a number of European projects such as SERENITY, SENSORIA, ANIKETOS, and NESSOS.

Rostyslav Zabolotnyi is a PhD student in Vienna University of Technology, Austria. Rostyslav currently works at the Distributed Systems Group, Institute of Information Systems, on a SIMPLI-CITY European project. His research interests are mainly Cloud computing, application performance monitoring, social computing, and code distribution.

Li Zhang is currently a Lecturer at Northeastern University at Shenyang, China. Until recently, she was a postdoctoral researcher at IC4, the Irish Centre for Cloud Computing and Commerce, with responsibilities for Cloud interoperability and Cloud service brokerage. In addition to her work on Cloud technologies, Li worked intensively on recommender systems, applied in areas such as service engineering. Prior to her IC4 work, she was a visiting researcher at the CLARITY Research Centre in Dublin.
